10. Bharat's mom gives him brain tonic to improve his memory.
11. 'An Interview with Arun Krishnamurthy' shows us how one person can make a lot of difference in saving the environment. Like Arun, we all should come together and play our part in keeping our environment clean.

Arun Krishnamurthy is a young environmentalist. Just at the age of 17, he founded E.F.I. - Environmentalist Foundation of India. He sacrificed his well paid job of Google for E.F.I. The first project of E.F.I. was 'Turtle Walk' - a move to save turtle eggs and its hatchlings. Arun and his team clean lakes, beaches and zoos. They also plant trees and make eco friendly paper bags.

Arun and his team remove garbage from water bodies and make them livable for water animals and birds. They use heavy machinery like earth movers and Poclaim to desilt the lake. E.F.I. encourages young students to volunteer. It also offers fellowships to students who are interested in saving environment.

Indeed, EFI is a ray of hope for the Environment !

- OR 'Kach and Devyani' is a beautiful story taken from Aadi Parva of the Mahabharat'. It is about how Kach risked his own life to learn the magic formula - Sanjivani Vidya to help the Devs.**

Devayani was Shukracharya's daughter. She was young, kind and beautiful. She was in love with Kach. She loved him deeply. She could not live without Kach. But Kach did not know this. When the Asurs killed Kach, she requested her father to revive him. Whenever he was killed, Devayani revived him with her father's help. When Kach's study was over, she asked him to marry her. But Kach refused to marry her because he considered her as a sister. So, Devayani got very angry. She cursed Kach that he will not be able to practice Sanjivani Vidya.

SECTION-E

56. "The future of our village depends on the actions we take today."

I live in Rampur. It is a small but beautiful village situated [located] in Bhavnagar district. Rampur is a village surrounded by natural beauty. There are 39 big and small farms in the village. At present, there are many facilities in the village such as : mineral water supply, a health care centre, underground drainage system, a bank with ATM and toilet in each home. People are happy and satisfied. But I think some facilities are still missing. There should be a primary school, a garden, a biogas plant, and a bus station in the village.

We know that we cannot get all these facilities in just one year. So this year, we are focusing only on two facilities : Primary school and biogas plant. The Gram Panchayat has passed our proposal to have a primary school in the village and the construction of the building has already been started. The villagers are happy now as their children wouldn't have to go too far for education.

For the biogas plant, I have motivated the village people for 'PPP model'. PPP means People's Participation Programme. Now they are ready to contribute for the plant. The biogas plant will make our village cleaner and we will also get free gas for cooking. Thus, by the end of this year our village will have two new facilities. We will continue this 'Progress Project' to make our village better.

"Together, we can transform our village into a model and modern village."

OR

"The future of our city depends on the actions we take today."

I live in Ahmedabad. It is a mega city full of love, life, progress and happening. But this so called 'Mega City' is also full of many problems such as : pollution, traffic jam, slum areas, lack of transportation facility, increasing crime rate, etc. If we want to make our city better, we will have to solve all these problems. This can be done [achieved] by PPP Model. PPP means 'People's Participation Programme'.

People can help by doing small things at home, school or office. We can reduce soil pollution by saying 'No' to plastic. We should not use plastic bags, cups, jars or other plastic items. We should dispose our waste properly. Government should make new rules to control the pollution. People or companies that spread pollution must be punished. Moreover, we should plant more trees and make our city green like Gandhinagar or Vadodara. Problem of traffic can be solved by carpooling and using public transport. We should use battery powered scooters and cars. Government should increase numbers of buses to encourage use of public transport. People of slum areas should be given [provided] houses and employment.

Thus, by following a few small and simple steps, we can make our city cleaner, greener and better.

"Together, we can transform our city into a model and modern city."

OR **"The Taj Mahal rises above the banks of river Yamuna like a solitary tear suspended on the cheek of time."**

- Rabindranath Tagore

The Taj Mahal is one of the seven wonders of the world. It is also a UNESCO World Heritage Site. It is a splendid creation of the Mughal King Shah Jahan. It is a mausoleum made from precious ivory - white marble. It is situated on the south bank of the Yamuna river in Agra. It is built in the loving memory of his dearest wife, Mumtaz Mahal. That is why it is said that Taj Mahal is not just a monument, it is a symbol of eternal love.

The Taj Mahal was opened in 1648. It is a wonderful example of Mughal and Iranian art and architecture. Semi precious stones were studded in white marbles to make it more beautiful. Its central dome is 240 feet (73 meter) high. It is surrounded by four smaller domes, four slender towers or minarets at the corners. There are beautiful gardens with fountains in front of the Taj Mahal.

Ustad Ahmad Lahouri, Ustad Isa were the architects of the Taj Mahal. More than 20,000 workers from India, Persia, Europe and the Ottoman Empire and 1,000 elephants worked for around two decades to build up this beautiful monument. The burials at the Taj Mahal are Mumtaz Mahal, Shah Jahan and Gauharara Begum. Indeed, the Taj Mahal is a splendid creation !

"If love is a journey, the Taj Mahal is the ultimate destination."

OR **Pollution and its harmful effects**

Pollution is the introduction of harmful substances or products into the environment. It can take many forms and has serious consequences for our planet and health. There are several types of Pollution like : Air pollution, water pollution, noise pollution, soil pollution.

Air pollution is caused by emissions from vehicles, factories, and burning fossil fuels. It leads to smog and respiratory problems. Water pollution occurs when harmful substances like chemicals and waste enter water bodies, affecting aquatic life and drinking water. Soil pollution results from the use of pesticides, industrial waste, and deforestation, leading to loss of fertile land. Noise Pollution is caused by loud noises from traffic, industries, and urban activities, affecting human and animal health.

Pollution poses a significant threat to the environment. Greenhouse gases from pollution contribute to global warming. Pollutants harm wildlife and disrupt ecosystems. Pollution degrades natural resources like water and soil.

Respiratory problems, heart diseases, and cancer are linked to pollution. Many species are endangered due to polluted habitats. Pollution cleanup and healthcare costs are substantial.

We can take several steps to combat pollution:

We should follow the 3 R's : Reduce, Reuse, Recycle. We can minimize waste by following these principles.

We should shift to renewable energy sources like solar and wind. We can reduce vehicle emissions by using public transportation. We should plant more trees. We should raise awareness among people about the dangers of pollution and how to reduce it. We should use eco-friendly products and reduce plastic use. Government should make strict laws that protect the environment. We should use water wisely and judiciously. We should turn off lights and appliances when not in use.

Pollution is a serious issue that requires immediate action. By understanding its types, causes, and effects, and by taking proactive steps, we can protect our environment and health for future generations.
