

TRIGONOMETRIC EQUATION

Principal Solution

The solutions of a trigonometric equation which lie in the interval $[0, 2\pi]$ are called principal solutions.

$$\text{Eg: } \sin x = \frac{1}{2} \Rightarrow x = \frac{\pi}{6}, \frac{5\pi}{6}, \frac{9\pi}{6}, \dots$$

But, principal solution of

$$\sin x = \frac{1}{2} \text{ are } \frac{\pi}{6}, \frac{5\pi}{6} \in [0, 2\pi]$$

General Solution

$$\sin \theta = \sin \alpha \Rightarrow \theta = n\pi + (-1)^n \alpha, \alpha \in \left[-\frac{\pi}{2}, \frac{\pi}{2}\right], n \in \mathbb{Z}$$

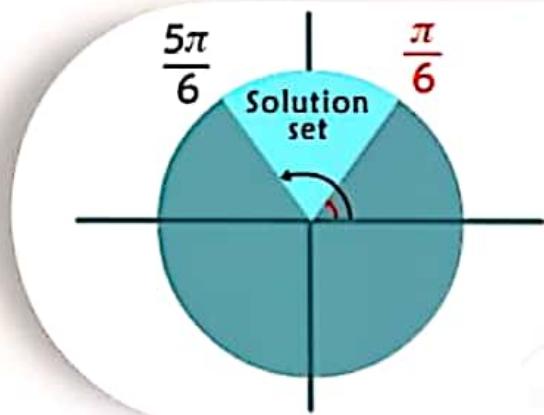

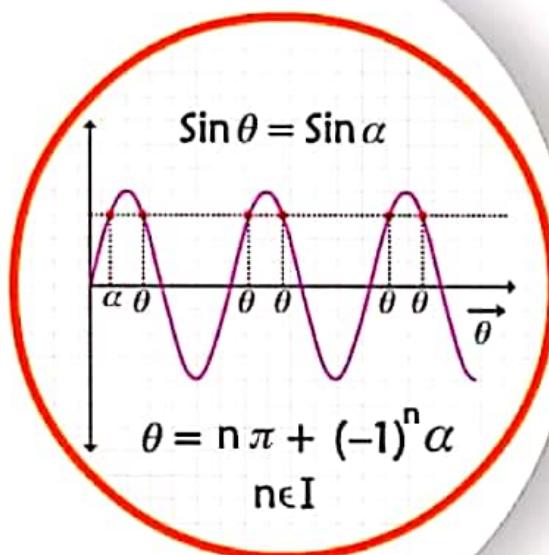

$$\cos \theta = \cos \alpha \Rightarrow \theta = 2n\pi + \alpha, \alpha \in [0, \pi], n \in \mathbb{Z}$$

$$\tan \theta = \tan \alpha \Rightarrow \theta = n\pi + \alpha, \alpha \in \left(-\frac{\pi}{2}, \frac{\pi}{2}\right), n \in \mathbb{Z}$$

$$\sin^2 \theta = \sin^2 \alpha \Rightarrow \theta = n\pi + \alpha, n \in \mathbb{I}$$

$$\cos^2 \theta = \cos^2 \alpha \Rightarrow \theta \equiv n\pi + \alpha, n \in I$$

$\tan^2 \theta = \tan^2 \alpha \Rightarrow \theta = n\pi + \alpha, n \in \mathbb{I}$; α is called one principal angle.

Trigonometric Inequalities

$$\text{Eg: } \sin x > \frac{1}{2} \Rightarrow \frac{\pi}{6} < x < \frac{5\pi}{6}$$
