

Problems based on distance and displacement

Basic level

1.	A body moves 6 <i>m</i> north. 8	<i>m</i> east and 10 <i>m</i> vertically upward	s, what is its resultant displaceme	ent from initial position[DCE 2000]
	(a) $10\sqrt{2}m$	(b) 10 <i>m</i>	(c) $\frac{10}{\sqrt{2}}m$	(d) $10 \times 2m$
2.	An athlete completes one ro minutes 20 seconds	und of a circular track of radius <i>R</i>	in 40 seconds. What will be his c	lisplacement at the end of 2 [NCERT 1990]
	(a) Zero	(b) 2 <i>R</i>	(c) $2\pi R$	(d) 7 <i>πR</i>
3.	A boy stops after travelling of the boy is	3 <i>km</i> towards east and then goes	4 <i>km</i> towards north along a plan	e road. The resultant displacement
	(a) 7 <i>km</i>	(b) 4 <i>km</i>	(c) $5 km$	(d) 15 km
4.	If the displacement of a part	ticle is zero, then what can we say	about its distance covered	
	(a) It must be zero	(b) It cannot be zero	(c) It is negative	(d) It may or may not be zero
5.	The location of a particle ha	s changed. What can we say about	t the displacement and the distan	ce covered by the particle
	(a) Both cannot be zero		(b) One of the two may be z	ero
	(c) Both must be zero		(d) If one is positive, the oth	ner is negative and vice versa
	Advance level			
6.	A particle moves along a cire	cular arc of radius R making an ar	ngle of θ at centre. The magnitud	e of displacement is
	(a) $2R\sin\theta/2$	(b) $2R\sin\theta$	(c) $R\sin\theta/2$	(d) $R\sin\theta$
► E	asic level	Problems based on	speed and velocity	
► E 7.	Casic level The ratio of the numerical v	Problems based on	speed and velocity werage speed of a body is always	[MP PET 2002]
► E 7.	Casic level The ratio of the numerical v (a) Unity	Problems based on alues of the average velocity and a (b) Unity or less	speed and velocity werage speed of a body is always (c) Unity or more	[MP PET 2002] (d) Less than unity
 E 7. 8. 	Casic level The ratio of the numerical v (a) Unity A particle moves along a ser	Problems based on alues of the average velocity and a (b) Unity or less nicircle of radius 10 <i>m</i> in 5 second	speed and velocity werage speed of a body is always (c) Unity or more s. The velocity of the particle is	[MP PET 2002] (d) Less than unity [Kerala (Engg.) 2001]

Motion in one dimension **119** A particle moves along x-axis in such a way that its coordinate x varies with time t according to the equation 11. $x = (2 - 5t + 6t^2)m$. The initial velocity of the particle is [MNR 1987; MP PET 1996] (a) -5 m/s(c) -3 m/s(b) 6 *m/s* (d) 3 m/sA car travels a distance of 2000 m. If the first half distance is covered at $40 \, km / hour$ and the second half with speed v and the 12. average speed is 48 km / hour, then the value of v is [CBSE PMT 1989] (a) 56 km / hour(b) 60 km / hour(c) $50 \, km \, / \, hour$ (d) 48 km / hourA car travels a distance S on a straight road in two hours and then returns to the starting point in the next three hours. Its 13. average velocity is (a) S/5(b) 2S/5(c) S/2 + S/3(d) None of the above When a particle moves with uniform velocity, which of the following relations are correct 14. (I) Average speed = average velocity (II) Instantaneous speed = instantaneous velocity (III) Distance covered = magnitude of displacement (b) I.II (c) II, III (d) I, III (a) I, II, III When a particle moves with variable velocity, which of the following statements are not correct 15. (I) Average speed = average velocity (II) Instantaneous speed = instantaneous velocity (III) Distance covered = magnitude of displacement (a) I, II, III (b) I, II (c) II, III (d) I, III A particle moves along the sides AB, BC, CD of a square of side 25 m with a velocity of 15 ms⁻¹. Its average velocity is 16. A (a) $15 m s^{-1}$ (c) $7.5 ms^{-1}$ (b) $10 m s^{-1}$ (d) $5 m s^{-1}$ A body has speed V, 2V and 3V in first 1/3 of distance S, seconds 1/3 of S and third 1/3 of S respectively. Its average speed will be 17. (c) $\frac{18}{11}V$ (d) $\frac{11}{18}V$ (a) V (b) 2V Advance level 18. A particle moving in a straight line covers half the distance with speed of 3 *m/s*. The other half of the distance is covered in two equal time intervals with speed of 4.5 m / s and 7.5 m / s respectively. The average speed of the particle during this motion is **[IIT-JEE 199**] (a) 4.0 m / s(b) 5.0 m / s(c) 5.5 m / s(d) 4.8 m / sIf the body covers one-third distance at speed v_1 , next one third at speed v_2 and last one third at speed v_3 , then average speed will 19. be (c) $\frac{v_1 v_2 v_3}{v_1 v_2 + v_2 v_3 + v_3 v_1}$ (d) $\frac{3v_1 v_2 v_3}{v_1 v_2 + v_2 v_3 + v_3 v_1}$ $\frac{v_1 v_2 + v_2 v_3 + v_3 v_1}{v_1 + v_2 + v_3}$ (b) $\frac{v_1 + v_2 + v_3}{3}$ (a) The displacement of the particle varies with time according to the relation $x = \frac{k}{h} [1 - e^{-bt}]$. Then the velocity of the particle is 20.

(a) $k(e^{-bt})$ (b) $\frac{k}{b^2 e^{-bt}}$ (c) $k b e^{-bt}$ (d) None of these

21. The displacement of a particle is given by $\sqrt{x} = t + 1$. Which of the following statements about its velocity is true (a) It is zero (b) It is constant but not zero (c) It increases with time (d) It decreases with time

Problems based on acceleration

Basic level

22.	A particle moves along a s when the acceleration is z	straight line such that its displaceme ero is	ent at any time <i>t</i> is given by	$S = t^3 - 6t^2 + 3t + 4$ metres .The velocity [CBSE PMT 1994; JIPMER 2001, 02]
	(a) $3 m s^{-1}$	(b) $-12 m s^{-1}$	(c) $42 m s^{-1}$	(d) $-9 m s^{-1}$
23.	A body is moving accord acceleration of the body is	ling to the equation $x = at + bt^2 - at$	ct^3 where $x =$ displacem	ent and <i>a</i> , <i>b</i> and <i>c</i> are constants. The [BHU 2000]
	(a) $a + 2bt$	(b) $2b + 6ct$	(c) $2b - 6ct$	(d) $3b - 6ct^2$
24.	The displacement is given	h by $x = 2t^2 + t + 5$, the acceleration a	at $t = 2s$ is	[EAMCET (Engg.)1995]
	(a) $4m/s^2$	(b) $8m/s^2$	(c) 10 m / s^2	(d) $15 m / s^2$
25.	The velocity of a body dep	ends on time according to the equat	tion $v = 20 + 0.1t^2$. The bod	ly is undergoing
				[MNR 1995; UPSEAT 2000]
	(a) Uniform acceleration	(b) Uniform retardation	(c) Non-uniform acce	eleration (d) Zero acceleration
26.	The displacement of a boo is	ly is given to be proportional to the	cube of time elapsed. The	magnitude of the acceleration of the body
				[NCERT 1990]
	(a) Increasing with time	(b) Decreasing with time	(c) Constant but not	zero (d) Zero
27.	The correct statement fro	om the following is		[MP PET 1993]
	(a) A body having zero ve	elocity will not necessarily have zero	acceleration	
	(b) A body having zero ve	elocity will necessarily have zero acc	eleration	
	(c) A body having unifor	m speed can have only uniform acce	eleration	
	(d) A body having non-u	niform velocity will have zero accele	ration	
28.	A particle moves along a s when the acceleration bec	straight line such that its displaceme comes zero is	ent at any time <i>t</i> is given by	$s = t^3 - 3t^2 + 2$ meter. The displacement [MP PMT 2001]
	(a) o meter	(b) 2 meter	(c) 3 meter	(d) – 2 <i>meter</i>
29.	What is the angle between	n instantaneous displacement and ad	cceleration during the retar	rded motion
	(a) Zero	(b) $\frac{\pi}{4}$	(c) $\frac{\pi}{2}$	(d) <i>π</i>
	Advance level			
30.	The acceleration of a part this particle at a time <i>t</i> wil	icle starting from rest, varies with t ll be	ime according to the relati	ion $A = -a\omega^2 \sin\omega t$. The displacement of
	(a) $-\frac{1}{2}(a\omega^2\sin\omega t)t^2$	(b) $a\omega\sin\omega t$	(c) $a\omega\cos\omega t$	(d) $a\sin\omega t$
31.	If the velocity of a particle	e is (10 + $2t^2$) m/s , then the average a	acceleration of the particle	between $2s$ and $5s$ is
	(a) $2 m/s^2$	(b) $4 m/s^2$	(c) $12 m/s^2$	(d) 14 m/s^2

40. A car accelerates from rest at a constant rate α for some time, after which it decelerates at a constant rate β and comes to rest. If the total time elapsed in *t*, then the maximum velocity acquired by the car is

(a)
$$\left(\frac{\alpha^2 + \beta^2}{\alpha\beta}\right) t$$
 (b) $\left(\frac{\alpha^2 - \beta^2}{\alpha\beta}\right) t$ (c) $\frac{(\alpha + \beta)t}{\alpha\beta}$ (d) $\frac{\alpha\beta t}{\alpha + \beta}$

41. A rocket is projected vertically upwards, whose velocity-time graph is shown in fig. The maximum height reached by the rocket is

	(a) 1 km (b) 10 km (c) 20 km (d) 60 km		$(a) = \frac{1}{2} $	B 80 100 120 140 Time	
42.	In the above problem the m	ean velocity of rocket in reaching the	e maximum height will be		
	(a) 100 <i>m/s</i>	(b) 50 <i>m/s</i>	(c) 500 <i>m/s</i>	(d) 25/3 <i>m/s</i>	
43 .	In the above problem the ac	cceleration of rocket will be			
	(a) 50 m/s^2	(b) 100 <i>m/s</i> ²	(c) 500 m/s^2	(d) 250 <i>m/s</i> ²	
44.	A lift is going up. The variat	ion in the speed of the lift is as given	in the graph. What is height to	o which the lift takes the	passenger
	(a) 3.6 m (b) 28.8 m		6.0	(IIT-	JEE 1970]
t M	ore Learning Mat	erials Here : 👉 👊		🕀 www.stud	entbro.in

(c) 36.0 m

(d) Cannot be calculated from the above graph

- **45.** The figure shows the velocity of a particle plotted against time *t*
 - (a) The displacement of the particle is zero
 - (b) The particle changes its direction of motion at some point
 - (c) The initial and final speeds of the particle are same
 - (d) All of the above statements are correct
- **46.** The v-t plot of a moving object is shown in the figure. The average velocity of the object during the first 10 seconds is
 - (a) o
 - (b) 2.5 ms⁻¹
 - (c) $5 m s^{-1}$
 - (d) 2 ms⁻¹
- **47.** Which of the following velocity time graphs is possible.

Advance level

48. A particle starts from rest, accelerates at 2 m/s^2 for 10s and then goes for constant speed for 30s and then decelerates at 4 m/s^2 till it stops. What is the distance travelled by it **[DCE 2001; AIIMS 2002]**

130 Motion in one dimension (c) Depends upon mass and volume of the body (d) At 3h/4 from the ground 113. A body is thrown vertically upwards. If air resistance is to be taken into account, then the time during which the body rises is [RPET 2000; KCET (Engg./Med.) 2001; DPMT 2001] (a) Equal to the time of fall (b) Less than the time of fall (c) Greater than the time of fall (d) Twice the time of fall A body falls freely from rest. It covers as much distance in the last second of its motion as covered in the first three seconds. The 114. body has fallen for a time of [MNR 1998] (a) 3 s (b) 5 s (c) 7 s (d) 9s A ball is dropped on the floor from a height of 10 m. It rebounds to a height 2.5 m. If the ball is in contact with the floor for 0.01 115. sec, the average acceleration during contact is [BHU 1997; CPMT 1997] (b) $2100 m / \sec^2$ upwards (a) $2100 m / \sec^2$ downwards (d) $700 m / \sec^2$ (c) $1400 m / \sec^2$ **116.** Two particles one 0.98 *m* vertically above the other are released simultaneously. They fall under gravity ($g = 9.8 m/s^2$). The separation between the two particles after 2 s will be (c) 0.98 m (a) 0.49 m (b) 4.9 m (d) 19.6 m 117. Two balls are dropped from different heights. One ball is dropped 2 sec after the other ball. If both balls reach the ground simultaneously after 5 sec of dropping the first ball the difference of initial heights of the two balls will be $(g = 9.8 \, m \, / \, s^2)$ (b) 78.4 m (c) 98 m (d) 117.6 m (a) 58.8 v **118.** A balloon is moving upwards with a constant velocity of 5 m / s. A stone is dropped from it. If at the moment of dropping the stone the balloon is at height of 50 m, then when the stone will hit the ground, at that time the height of the balloon will be $(g = 10 m / s^2)$ (a) 68.3 m (b) 63.5 m (c) 75.5 m (d) 88.7 m **119.** A stone thrown upwards with a velocity u reaches up to a height h. If the initial velocity is 2u the height attained would be (a) 2h(b) 4 h (c) 8 h (d) 16 h 120. A person throws balls into the air one after the other at an interval of one second. The next ball is thrown when the velocity of the ball thrown earlier is zero. To what height the ball rise (Take $g = 10 m / s^{-2}$) (a) 5 m (b) 10 m (c) 25 m (d) 40 m **121.** A body is projected vertically up with a velocity v and after some time it returns to the point from which it was projected. The average velocity and average speed of the body for the total time of flight are (a) $\vec{v}/2$ and v/2(b) o and v/2(c) o and o (d) $\vec{v}/2$ and o 122. Two balls A and B are simultaneously thrown. A is thrown from ground level with a velocity of 20 ms^{-1} in the upward direction and B is thrown from a height of 40 m in the downward direction with same velocity. Where will the two balls meet (c) 35 m (a) 15 m (b) 25 m(d) 45 m A stone is dropped from a height h. Simultaneously, another stone is thrown up from the ground which reaches a height 4 h. The 123. two stones cross each other after time (d) $\sqrt{\frac{h}{2g}}$ (a) $\sqrt{\frac{h}{8g}}$ (b) $\sqrt{8gh}$ (c) $\sqrt{2gh}$ A body is released from a height towards the ground level. Just after one second another body is released from same height. The 124. distance between two bodies just after two seconds after the release of second body will be (a) 4.9 m (b) 9.8 m (c) 19.6 m (d) 24.5 m A stone falls from the top of the tower in 8 sec. How much time will it take to cover the first quarter of the distance starting from 125. the top (a) 4 sec (b) 2 sec (c) 1 sec (d) None of these **126.** Three particles A, B and C are thrown from the top of a tower with the same speed. A is thrown straight up, B is thrown straight down and C is thrown horizontally. They hit the ground with speeds v_A , v_B and v_C respectively, then

(a)
$$v_A = v_B = v_C$$
 (b) $v_A > v_B > v_C$ (c) $v_A = v_B > v_C$ (d) $v_A > v_B = v_C$

Advance level

- **127.** Four marbles are dropped from the top of a tower one after the other with an interval of one second. The first one reaches the ground after 4 *seconds*. When the first one reaches the ground the distances between the first and second, the second and third and the third and forth will be respectively
 - (a) 35, 25 and 15 m (b) 30, 20 and 10 m (c) 20, 10 and 5 m (d) 40, 30 and 20 m
- **128.** A ball is dropped from the top of the tower of height *h*. It covers a distance of h/2 in the last second of its motion. How long does the ball remain in air (Take $g = 10 \text{ ms}^{-2}$)

(a)
$$\sqrt{2} s$$
 (b) $(2 + \sqrt{2}) s$ (c) $2 s$ (d) None of the above

129. A body is dropped form height *h*. If t_1 and t_2 be the times in covering first half and next half distances respectively, then the correct relation is

(a)
$$t_1 = t_2$$
 (b) $t_1 = 2t_2$ (c) $t_1 = \frac{t_2}{\sqrt{2} - 1}$ (d) $t_1 = 4t_2$

- **130.** A balloon rises from rest with a constant acceleration g/8. A stone is released from it when it has risen to height *h*. The time taken by the stone to reach the ground is
 - (a) $4\sqrt{\frac{h}{g}}$ (b) $2\sqrt{\frac{h}{g}}$ (c) $\sqrt{\frac{2h}{g}}$ (d) $\sqrt{\frac{g}{h}}$
- **131.** A ball is projected upwards from a height h above the surface of the earth with velocity v. The time at which the ball strikes the ground is

(a)
$$\frac{v}{g} + \frac{2hg}{\sqrt{2}}$$
 (b) $\frac{v}{g} \left[1 - \sqrt{1 + \frac{2h}{g}} \right]$ (c) $\frac{v}{g} \left[1 + \sqrt{1 + \frac{2gh}{v^2}} \right]$ (d) $\frac{v}{g} \left[1 + \sqrt{v^2 + \frac{2g}{h}} \right]$

132. Two bodies are thrown simultaneously from a tower with same initial velocity v_0 : one vertically upwards, the other vertically downwards. The distance between the two bodies after time *t* is

(a)
$$2v_0t + \frac{1}{2}gt^2$$
 (b) $2v_0t$ (c) $v_0t + \frac{1}{2}gt^2$ (d) v_0t

- **133.** A body falls freely from the top of a tower. It covers 36% of the total height in the last second before striking the ground level. The height of the tower is
 - (a) 50 m (b) 75 m (c) 100 m (d) 125 m
- **134.** A particle is projected upwards. The times corresponding to height h while ascending and while descending are t_1 and t_2 respectively. The velocity of projection will be

(a)
$$gt_1$$
 (b) gt_2 (c) $g(t_1 + t_2)$ (d) $\frac{g(t_1 + t_2)}{2}$

- **135.** A projectile is fired vertically upwards with an initial velocity u. After an interval of T seconds a second projectile is fired vertically upwards, also with initial velocity u.
 - (a) They meet at time $t = \frac{u}{g}$ and at a height $\frac{u^2}{2g} + \frac{gT^2}{8}$ (b) They meet at time $t = \frac{u}{g} + \frac{T}{2}$ and at a height $\frac{u^2}{2g} + \frac{gT^2}{8}$
 - (c) They meet at time $t = \frac{u}{g} + \frac{T}{2}$ and at a height $\frac{u^2}{2g} \frac{gT^2}{8}$ (d) They never meet
