#### 34. Q. What is meant by......

Ans. Merged cells are a single cell that is created by combining two or more selected cells. The cell reference for a merged cell is the upper left cell in the original selected range. When two or more adjacent horizontal or vertical cells are merged, the cells become one large cell and displayed across multiple columns or rows. The contents of one appear in the center of the merged cell.

#### To merge the cell:

- 1. Select the two or more adjacent cells that we want to merge.
- 2. On the Home tab, in the Alignment group, click, merge and center (or bottom).
- 3. The cell will be merged in a row or column, and the cell contents will be centered in the merged cell. To merge cell without centering, click the arrow next to Merge and Centre and then click Merge Across or Merge Cells. The cell address of merge cells will be the address of lower active cell.
- 4. To change the text alignment in the merged cell, select the cell; click any of the alignment buttons in the Alignment group on the Home tab.

#### To split a merged cell:

- 1. Select the merged cell.
- 2. When we select a merged cell, the Merge and Centre button also appears selected in the Alignment group on the Home tab.
- 3. To split the merged cell, click merge and Centre. The contents of the merged cell will appear in the upper left cell of the range of split cell.
