|   | assessment of the candidates. A small mistake in evaluation may lead to serious problems      |
|   | which may affect the future of the candidates, education system and teaching profession. To   |
|   | avoid mistakes, it is requested that before starting evaluation, you must read and understand |
|   | the spot evaluation guidelines carefully.                                                     |

- 2 "Evaluation policy is a confidential policy as it is related to the confidentiality of the examinations conducted, Evaluation done and several other aspects. Its' leakage to public in any manner could lead to derailment of the examination system and affect the life and future of millions of candidates. Sharing this policy/document to anyone, publishing in any magazine and printing in News Paper/Website etc. may invite action under various rules of the Board and IPC."
- 3 Evaluation is to be done as per instructions provided in the Marking Scheme. It should not be done according to one's own interpretation or any other consideration. Marking Scheme should be strictly adhered to and religiously followed. However, while evaluating, answers which are based on latest information or knowledge and/or are innovative, they may be assessed for their correctness otherwise and due marks be awarded to them.
- The Marking scheme carries only suggested value points for the answers. 4

These are Guidelines only and do not constitute the complete answer. The students can have their own expression and if the expression is correct, the due marks should be awarded accordingly.

- The Head-Examiner must go through the first five answer books evaluated by each evaluator 5 on the first day, to ensure that evaluation has been carried out as per the instructions given in the Marking Scheme. If there is any variation, the same should be zero after deliberation and discussion. The remaining answer books meant for evaluation shall be given only after ensuring that there is no significant variation in the marking of individual evaluators.
- Evaluators will mark ( $\sqrt{}$ ) wherever answer is correct. For wrong answer CROSS 'X" be 6 marked. Evaluators will not put right ( ) while evaluating which gives the impression that answer is correct, and no marks are awarded. This is most common mistake which evaluators are committing.
- 7 If a question has parts, please award marks on the right-hand side for each part. Marks awarded for different parts of the question should then be totalled up and written in the lefthand margin and encircled. This may be followed strictly.
- If a question does not have any parts, marks must be awarded in the left-hand margin and 8 encircled. This may also be followed strictly.

A tank, as shown in the figure below, formed using a combination of a cylinder and a cone, offers better drainage as compared to a flat bottomed tank.

A tap is connected to such a tank whose conical part is full of water. Water is dripping out from a tap at the bottom at the uniform rate of 2 cm<sup>3</sup>/s. The semi-vertical angle of the conical tank is 45°.

On the basis of given information, answer the following questions:

- Find the volume of water in the tank in terms of its radius r. (i)
- Find rate of change of radius at an instant when  $r = 2\sqrt{2}$  cm. (ii)
- (a) Find the rate at which the wet surface of the conical tank is decreasing at an instant when radius  $r = 2\sqrt{2}$  cm.

(i)  $v = \frac{1}{3} \pi r^2 h = \frac{1}{3} \pi r^3$ 

(b) Find the rate of change of height 'h' at an instant when slant height is 4 cm.

There are different types of Yoga which involve the usage of different poses of Yoga Asanas, Meditation and Pranayam as shown in the figure below:

The Venn diagram below represents the probabilities of three different types of Yoga, A, B and C performed by the people of a society. Further, it is given that probability of a member performing type C Yoga is 0.44.

On the basis of the above information, answer the following questions:

- Find the value of x.
- (ii) Find the value of y.
