	Marking Scheme Strictly Confidential (For Internal and Restricted use only) Secondary School Examination, 2024 SUBJECT NAME MATHEMATICS (BASIC) (Q.P. CODE 430/3/2)
General Instructions: -	
1	You are aware that evaluation is the most important process in the actual and correct assessment of the candidates. A small mistake in evaluation may lead to serious problems which may affect the future of the candidates, education system and teaching profession. To avoid mistakes, it is requested that before starting evaluation, you must read and understand the spot evaluation guidelines carefully.
2	**"Evaluation policy is a confidential policy as it is related to the confidentiality of the examinations conducted, evaluation done and several other aspects. Its leakage to public in any manner could lead to derailment of the examination system and affect the life and future of millions of candidates. Sharing this policy/document to anyone, publishing in any magazine and printing in News Paper/Website etc. may invite action under various rules of the Board and IPC."**
3	Evaluation is to be done as per instructions provided in the Marking Scheme. It should not be done according to one's own interpretation or any other consideration. Marking Scheme should be strictly adhered to and religiously followed. **However, while evaluating, answers which are based on latest information or knowledge and/or are innovative, they may be assessed for their correctness otherwise and due marks be awarded to them. In class-X, while evaluating two competency-based questions, please try to understand given answer and even if reply is not from marking scheme but correct competency is enumerated by the candidate, due marks should be awarded.**
4	The Marking scheme carries only suggested value points for the answers. These are in the nature of Guidelines only and do not constitute the complete answer. The students can have their own expression and if the expression is correct, the due marks should be awarded accordingly.
5	The Head-Examiner must go through the first five answer books evaluated by each evaluator on the first day, to ensure that evaluation has been carried out as per the instructions given in the Marking Scheme. If there is any variation, the same should be zero after deliberation and discussion. The remaining answer books meant for evaluation shall be given only after ensuring that there is no significant variation in the marking of individual evaluators.
6	Evaluators will mark(✓) wherever answer is correct. For wrong answer CROSS 'X" be marked. Evaluators will not put right (✓) while evaluating which gives an impression that answer is correct and no marks are awarded. **This is most common mistake which evaluators are committing.**
7	If a question has parts, please award marks on the right-hand side for each part. Marks awarded for different parts of the question should then be totaled up and written in the left-hand margin and encircled. This may be followed strictly.
8	If a question does not have any parts, marks must be awarded in the left-hand margin and encircled. This may also be followed strictly.
9	If a student has attempted an extra question, answer of the question deserving more marks should be retained and the other answer scored out with a note **"Extra Question"**.
10	No marks to be deducted for the cumulative effect of an error. It should be penalized only

	once.
11	A full scale of marks <u>(0-80)</u> (example 0 to 80/70/60/50/40/30 marks as given in Question Paper) has to be used. Please do not hesitate to award full marks if the answer deserves it.
12	Every examiner has to necessarily do evaluation work for full working hours i.e., 8 hours every day and evaluate 20 answer books per day in main subjects and 25 answer books per day in other subjects (Details are given in Spot Guidelines).This is in view of the reduced syllabus and number of questions in question paper.
13	Ensure that you do not make the following common types of errors committed by the Examiner in the past:- ● Leaving answer or part thereof unassessed in an answer book. ● Giving more marks for an answer than assigned to it. ● Wrong totaling of marks awarded on an answer. ● Wrong transfer of marks from the inside pages of the answer book to the title page. ● Wrong question wise totaling on the title page. ● Wrong totaling of marks of the two columns on the title page. ● Wrong grand total. ● Marks in words and figures not tallying/not same. ● Wrong transfer of marks from the answer book to online award list. ● Answers marked as correct, but marks not awarded. (Ensure that the right tick mark is correctly and clearly indicated. It should merely be a line. Same is with the X for incorrect answer.) ● Half or a part of answer marked correct and the rest as wrong, but no marks awarded.
14	While evaluating the answer books if the answer is found to be totally incorrect, it should be marked as cross (X) and awarded zero (0)Marks.
15	Any unassessed portion, non-carrying over of marks to the title page, or totaling error detected by the candidate shall damage the prestige of all the personnel engaged in the evaluation work as also of the Board. Hence, in order to uphold the prestige of all concerned, it is again reiterated that the instructions be followed meticulously and judiciously.
16	The Examiners should acquaint themselves with the guidelines given in the "**Guidelines for spot Evaluation**" before starting the actual evaluation.
17	Every Examiner shall also ensure that all the answers are evaluated, marks carried over to the title page, correctly totaled and written in figures and words.
18	The candidates are entitled to obtain photocopy of the Answer Book on request on payment of the prescribed processing fee. All Examiners/Additional Head Examiners/Head Examiners are once again reminded that they must ensure that evaluation is carried out strictly as per value points for each answer as given in the Marking Scheme.

<div align="center">

OR

</div>

    (b)   Explain why $(7 \times 11 \times 13 + 2 \times 11)$ is not a prime number.

Solution: (a) Let us assume that $x = -7 - 2\sqrt{3}$ is a rational number

        $\Rightarrow \sqrt{3} = \dfrac{-7 - x}{2}$ *1*

        Now RHS is rational but LHS is irrational   *1*

        ∴ Our assumption is wrong

        Hence $-7 - 2\sqrt{3}$ is irrational.

OR

(b) $7 \times 11 \times 13 + 2 \times 11 = 11 \times (7 \times 13 + 2)$ *1*

∴ the given number has more than two factors *1*

Hence, it is not a prime number.

22. There are 80 cards numbered from 1 to 80. One card is drawn at random from them. Find the probability that the number on the selected card is not divisible by 8.

Solution: Numbers divisible by 8 are 8, 16, 24, 32, 40, 48, . . . , 80

∴ P(selected number is divisible by 8) = $\dfrac{10}{80}$ or $\dfrac{1}{8}$ *1*

∴ P(selected number is not divisible by 8) = $1 - \dfrac{1}{8} = \dfrac{7}{8}$ *1*

---

23. Find a point which is equidistant from the points A(−1, 5) and B(2, 1). How many such points are there ?

Solution: Let the required point be P(x, y)
Using PA = PB to get $6x - 8y + 21 = 0$ *1*

Any correct point using this equation $\dfrac{1}{2}$

(**Note:** For getting mid-point of AB as ($\dfrac{1}{2}$, 3), 1½ marks to be awarded)

Infinite points. $\dfrac{1}{2}$

---

24. (a) If Q(0, 2) is equidistant from P(5, −3) and R(x, 7), find the value(s) of x.

OR

(b) If A(1, 1) and B(7, 9) are the end points of a diameter of a circle, then find the co-ordinates of the centre of the circle.

Solution: (a) $(0 - 5)^2 + (2 + 3)^2 = (0 - x)^2 + (2 - 7)^2$ *1*

⇒ $25 + 25 = x^2 + 25$

⇒ $x = \pm 5$ *1*

OR

    (b) Coordinates of centre are $\left(\dfrac{7+1}{2}, \dfrac{1+9}{2}\right)$ *1*

        i.e., (4, 5)   *1*

---

25.   Evaluate : $3 \sec^2 30° \csc 30° + \tan^2 60° \cdot \tan^2 45°$

Solution: $3 \times \dfrac{4}{3} \times 2 + 3 \times 1 = 11$ $1\dfrac{1}{2} + \dfrac{1}{2}$

SECTION C

26.   Find the zeroes of the polynomial $2x^2 + 3x - 9$ and verify the relationship between the zeroes and the co-efficients of polynomial.
Solution: $2x^2 + 3x - 9 = (2x - 3)(x + 3)$ *1*

        Zeroes of the polynomial are x $= \dfrac{3}{2}, -3$ *1*

        Sum of the zeroes $= -3 + \dfrac{3}{2} = \dfrac{-3}{2} = \dfrac{-(Coeff.\,of\,x)}{Coeff.\,of\,x^2}$ $\dfrac{1}{2}$

        Product of the zeroes $= -3 \times \dfrac{3}{2} = \dfrac{-9}{2} = \dfrac{Constant\ term}{Coeff.\ of\ x^2}$ $\dfrac{1}{2}$

---

27.   In the given figure, $\angle ABC = \angle ACB$ and $\dfrac{BC}{BE} = \dfrac{BD}{AC}$.

    Show that $\triangle ABE \sim \triangle DBC$ and AE $\parallel$ DC.

Solution: It is given that $\dfrac{BC}{BE} = \dfrac{BD}{AC}$

$$\Rightarrow \frac{BE}{BC} = \frac{AB}{DB} \quad (\because \angle ABC = \angle ACB \Rightarrow AC = AB) \hspace{3cm} 1$$

Also $\angle B$ is common

$\therefore \Delta\, ABE \sim \Delta\, DBC$ (SAS similarity) $\hspace{4cm}$ *1*

$$\Rightarrow \angle BAE = \angle BDC \hspace{6cm} \frac{1}{2}$$

But these are corresponding angles $\therefore$ AE // DC. $\hspace{3cm} \frac{1}{2}$

----

28. The altitude of a right-angled triangle is 7 cm less than its base. If its hypotenuse is 17 cm long, then

    (a) represent the above information in the form of a quadratic equation;

    (b) find the length of the sides of the triangle.

Solution: (a) Let base of the right triangle be x cm.

$\therefore$ altitude of the right triangle is (x – 7) cm $\hspace{3cm} \frac{1}{2}$

Using Pythagoras theorem: $(17)^2 = x^2 + (x - 7)^2$ $\hspace{2cm} \frac{1}{2}$

$\Rightarrow 2x^2 - 14x - 240 = 0 \quad \text{or} \quad x^2 - 7x - 120 = 0 \hspace{1.5cm} \frac{1}{2}$

(b) $x^2 - 7x - 120 = 0 \Rightarrow (x - 15)\,(x + 8) = 0 \hspace{2cm} \frac{1}{2}$

$\therefore x = 15 \;(\text{as } x \neq - 8\,) \hspace{5cm} \frac{1}{2}$

$\therefore$ sides of the triangle other than hypotenuse are 15 cm and 8 cm $\hspace{1cm} \frac{1}{2}$

----

29. Find the HCF and LCM of 96 and 404, using prime-factorisation method.

Solution: $\quad 96 = 2^5 \times 3 \;\text{ and }\; 404 = 2^2 \times 101 \hspace{3cm} 1+1$

$\text{HCF} = 2^2 = 4 \hspace{7cm} \frac{1}{2}$

$\text{LCM} = 2^5 \times 3 \times 101 \hspace{6cm} \frac{1}{2}$

$\quad = 9696$

----

30. (a) Prove that $(\sin \theta + \text{cosec } \theta)^2 + (\cos \theta + \sec \theta)^2 = 7 + \tan^2 \theta + \cot^2 \theta$.

OR

(b) If $\cos A = \dfrac{5}{13}$, then verify that $\dfrac{\cos A}{1 - \tan A} + \dfrac{\sin A}{1 - \cot A} = \cos A + \sin A$.

Solution: (a)

$$\text{LHS} = \sin^2\theta + \text{cosec}^2\theta + 2\sin\theta.\text{cosec}\theta + \cos^2\theta + \sec^2\theta + 2\cos\theta.\sec\theta \qquad 1$$

$$= (\sin^2 \theta + \cos^2 \theta) + (\text{cosec}^2 \theta + \sec^2 \theta) + 2\sin \theta \times \dfrac{1}{\sin \theta} + 2\cos \theta \times \dfrac{1}{\cos \theta} \qquad \dfrac{1}{2}$$

$$= 1 + 1 + \cot^2 \theta + 1 + \tan^2 \theta + 2 + 2 \qquad 1$$

$$= 7 + \tan^2 \theta + \cot^2 \theta = \text{RHS} \qquad \dfrac{1}{2}$$

OR

(b) $\cos A = \dfrac{5}{13} \Rightarrow \sin A = \dfrac{12}{13}$, $\tan A = \dfrac{12}{5}$ and $\cot A = \dfrac{5}{12}$ $\qquad \dfrac{1}{2} + \dfrac{1}{2} + \dfrac{1}{2}$

$$\text{LHS} = \dfrac{\dfrac{5}{13}}{1 - \dfrac{12}{5}} + \dfrac{\dfrac{12}{13}}{1 - \dfrac{5}{12}} = \dfrac{25}{-91} + \dfrac{144}{91}$$

$$= \dfrac{119}{91} = \dfrac{17}{13} \qquad 1$$

$$\text{RHS} = \dfrac{5}{13} + \dfrac{12}{13} = \dfrac{17}{13} \qquad \dfrac{1}{2}$$

$\therefore$ LHS = RHS

33. A man standing on the deck of a ship, which is 10 m above water level, observes the angle of elevation of the top of a hill as 60° and the angle of depression of the base of the hill as 30°. Find the distance of the hill from the ship and the height of the hill. (Take $\sqrt{3}$ = 1.73)

Solution:
For Correct fig.: 1

Let the height of the hill be h m and distance from ship is x m.

$$\tan 60° = \frac{h - 10}{x} \Rightarrow h - 10 = x\sqrt{3} \text{ _____ (i)} \hspace{3cm} 1 + \frac{1}{2}$$

$$\tan 30° = \frac{10}{x} \Rightarrow x = 10\sqrt{3} \text{ _____ (ii)} \hspace{3cm} 1 + \frac{1}{2}$$

Solving (i) and (ii) x = 10 × 1.73 = 17.3 m $\hspace{4cm} \dfrac{1}{2}$

$$h = 40 \text{ m} \hspace{9cm} \dfrac{1}{2}$$

(b) Prove that the parallelogram circumscribing a circle is a rhombus. Also, find area of the rhombus, if radius of circle is 3 cm and length of one side of the rhombus is 10 cm.

Solution: (a)

Since OP $\perp$ AB and bisects it

$\therefore$ BQ = QA = 3 cm   *1*

Using Pythagoras Theorem in Δ OQB, OQ = 4 cm   *$\frac{1}{2}$*

Taking PQ = x cm and PB = y cm,

Using Pythagoras Theorem in Δ OBP and Δ PQB

$x^2 + 9 = y^2$ and $(x + 4)^2 = y^2 + 25$ *1+1*

Solving equations to get x = $\dfrac{9}{4}$ and y = $\dfrac{15}{4}$ *1+$\frac{1}{2}$*

(b) Let ABCD be a parallelogram touching the circle at P, Q, R and S

AP = AS, BP = BQ, CR= CQ and DR = DS   *1*

**Fig:** 1 mark

Adding all equations

AP + BP + CR + DR = AS + DS + CQ + BQ   *$\frac{1}{2}$*

$\Rightarrow$ AB + CD = AD + BC $\frac{1}{2}$

$\Rightarrow$ 2AB = 2BC or AB = BC   1
Hence, ABCD is a rhombus
Area of the rhombus = 4 × area of triangle AOB

$$= 4 \times \frac{1}{2} \times 10 \times 3 = 60 \text{ cm}^2$$ 1

Frequency	5	8	10	12	7	8

Solution:

C.I.	x	f	$u = \frac{x-50}{20}$	fu	cf
0 – 20	10	5	– 2	– 10	5
20 – 40	30	8	– 1	– 8	13

80 – 100	90	7	2	14	42
100 – 120	110	8	3	24	50

For correct table
$2\frac{1}{2}$

$$\text{Mean} = 50 + 20 \times \frac{32}{50} = 62.8$$ $1\frac{1}{2}$

$$\text{Median} = 60 + \frac{20}{12}(25 - 23) = 63.3 \text{ (approx)}$$ 1

36. In the figure given below, a folding table is shown :
The legs of the table are represented by line segments AB and CD intersecting at O. Join AC and BD.

Considering table top is parallel to the ground, and OB = x, OD = x + 3, OC = 3x + 19 and OA = 3x + 4, answer the following questions :

(i)   Prove that Δ OAC is similar to ΔOBD.

(ii) Prove that $\dfrac{OA}{AC} = \dfrac{OB}{BD}$.

(iii) (a) Observe the figure and find the value of x. Hence, find the length of OC.

OR

(iii) (b) Observe the figure and find $\dfrac{BD}{AC}$.

Solution: (i)   Since ∠D = ∠C and ∠B = ∠A (Alternate interior angles)
∴ Δ OAC ~ Δ OBD (By AA similarity)   *1*

(ii) Δ OAC ~ Δ OBD $\Rightarrow \dfrac{OA}{OB} = \dfrac{AC}{BD}$ or $\dfrac{OA}{AC} = \dfrac{OB}{BD}$ *1*

(iii) (a) Δ OAC ~ Δ OBD $\Rightarrow \dfrac{OA}{OB} = \dfrac{OC}{OD}$

$\Rightarrow \dfrac{3x + 4}{x} = \dfrac{3x + 19}{x + 3} \Rightarrow x = 2$ $1+\dfrac{1}{2}$
∴ OC = 25 $\dfrac{1}{2}$

OR

(iii) (b) Δ OBD ~ Δ OAC $\Rightarrow \dfrac{OB}{OA} = \dfrac{OD}{OC} = \dfrac{BD}{AC}$

$\Rightarrow \dfrac{x}{3x + 4} = \dfrac{x + 3}{3x + 19} \Rightarrow x = 2$ $1+\dfrac{1}{2}$

∴ $\dfrac{BD}{AC} = \dfrac{2}{10}$ or $\dfrac{1}{5}$ $\dfrac{1}{2}$
