SET~3

परीक्षार्थी प्रश्न-पत्र कोड को उत्तर-पुस्तिका के मुख-पृष्ठ पर अवश्य लिखें । Candidates must write the Q.P. Code on the title page of the answer-book.

गणित (बुनियादी) MATHEMATICS (BASIC)

निर्धारित समय : 3 घण्टे अधिकतम अंक : 80 Time allowed : 3 hours Maximum Marks : 80 नोट / NOTE : कृपया जाँच कर लें कि इस प्रश्न-पत्र में मुद्रित पृष्ठ 27 हैं । (i) Please check that this question paper contains 27 printed pages. (ii) प्रश्न-पत्र में दाहिने हाथ की ओर दिए गए प्रश्न-पत्र कोड को परीक्षार्थी उत्तर-पुस्तिका के मुख-पृष्ठ पर लिखें । Q.P. Code given on the right hand side of the guestion paper should be written on the title page of the answer-book by the candidate. कृपया जाँच कर लें कि इस प्रश्न-पत्र में 38 प्रश्न हैं । (iii) Please check that this question paper contains 38 questions. कृपया प्रश्न का उत्तर लिखना शुरू करने से पहले, उत्तर पुस्तिका में प्रश्न का क्रमांक अवश्य (iv) लिखें । Please write down the serial number of the question in the answer-book before attempting it. इस प्रश्न-पत्र को पढ़ने के लिए 15 मिनट का समय दिया गया है । प्रश्न-पत्र का वितरण (v) पूर्वाह्न में 10.15 बजे किया जाएगा | 10.15 बजे से 10.30 बजे तक छात्र केवल प्रश्न-पत्र को पढ़ेंगे और इस अवधि के दौरान वे उत्तर-पुस्तिका पर कोई उत्तर नहीं लिखेंगे । 15 minute time has been allotted to read this question paper. The question paper will be distributed at 10.15 a.m. From 10.15 a.m. to 10.30 a.m., the students will read the question paper only and will not write any answer on the answer-book during this period.

P.T.O.

सामान्य निर्देश :

निम्नलिखित निर्देशों को बहुत सावधानी से पढ़िए और उनका सख़्ती से पालन कीजिए :

- (i) इस प्रश्न-पत्र में 38 प्रश्न हैं । सभी प्रश्न अनिवार्य हैं ।
- (ii) यह प्रश्न-पत्र पाँच खण्डों में विभाजित है क, ख, ग, घ एवं ङ ।
- (iii) खण्ड क में प्रश्न संख्या 1 से 18 तक बहुविकल्पीय (MCQ) तथा प्रश्न संख्या 19 एवं 20 अभिकथन एवं तर्क आधारित एक-एक अंक के प्रश्न हैं।
- (iv) खण्ड ख में प्रश्न संख्या 21 से 25 तक अति लघु-उत्तरीय (VSA) प्रकार के दो-दो अंकों के प्रश्न हैं ।
- (v) खण्ड ग में प्रश्न संख्या 26 से 31 तक लघु-उत्तरीय (SA) प्रकार के तीन-तीन अंकों के प्रश्न हैं।
- (vi) खण्ड घ में प्रश्न संख्या 32 से 35 तक दीर्घ-उत्तरीय (LA) प्रकार के पाँच-पाँच अंकों के प्रश्न हैं ।
- (vii) खण्ड ङ में प्रश्न संख्या 36 से 38 तक प्रकरण अध्ययन आधारित चार-चार अंकों के प्रश्न हैं। प्रत्येक प्रकरण अध्ययन में आंतरिक विकल्प **दो-दो** अंकों के प्रश्न में दिया गया है।
- (viii) प्रश्न-पत्र में समग्र विकल्प नहीं दिया गया है। यद्यपि, खण्ड ख के 2 प्रश्नों में, खण्ड ग के 2 प्रश्नों में, खण्ड घ के 2 प्रश्नों में तथा खण्ड ङ के 3 प्रश्नों में आंतरिक विकल्प का प्रावधान दिया गया है।
- (ix) जहाँ आवश्यक हो स्वच्छ आकृतियाँ बनाइए । जहाँ आवश्यक हो π = $\frac{22}{7}$ लीजिए, यदि अन्यथा न दिया गया हो ।
- (x) कैल्कुलेटर का उपयोग वर्जित है ।

खण्ड क

इस खण्ड में बह्विकल्पीय प्रश्न (MCQ) हैं, जिनमें प्रत्येक प्रश्न 1 अंक का है।

- दो घनों, जिनमें से प्रत्येक का किनारा 5 cm है, के संलग्न फलकों को मिलाकर जोड़ा गया है । इससे प्राप्त घनाभ का पृष्ठीय क्षेत्रफल है :
 - $(a) \qquad 200 \ cm^2$
 - (b) 300 cm^2
 - (c) 125 cm^2
 - (d) 250 cm^2

430/C/3

Page 2

General Instructions :

Read the following instructions very carefully and strictly follow them :

- (i) This question paper contains **38** questions. All questions are **compulsory**.
- (ii) This question paper is divided into five Sections A, B, C, D and E.
- (iii) In Section A, Questions no. 1 to 18 are multiple choice questions (MCQs) and questions number 19 and 20 are Assertion-Reason based questions of 1 mark each.
- (iv) In Section B, Questions no. 21 to 25 are very short answer (VSA) type questions, carrying 2 marks each.
- (v) In Section C, Questions no. 26 to 31 are short answer (SA) type questions, carrying 3 marks each.
- (vi) In Section D, Questions no. 32 to 35 are long answer (LA) type questions carrying 5 marks each.
- (vii) In Section E, Questions no. 36 to 38 are case study based questions carrying 4 marks each. Internal choice is provided in 2 marks questions in each case study.
- (viii) There is no overall choice. However, an internal choice has been provided in 2 questions in Section B, 2 questions in Section C, 2 questions in Section D and 3 questions in Section E.
- (ix) Draw neat diagrams wherever required. Take $\pi = \frac{22}{7}$ wherever required, if not stated.
- (x) Use of calculators is **not** allowed.

SECTION A

This section comprises multiple choice questions (MCQs) of 1 mark each.

- **1.** Two cubes each of 5 cm edge are joined end to end. The surface area of the resulting cuboid is :
 - (a) 200 cm^2
 - (b) 300 cm^2
 - (c) 125 cm^2
 - (d) 250 cm^2

430/C/3

Page 3

P.T.O.

- **2.** बिंदुओं (c, 0) और (0, − c) के बीच की दूरी है :
 - (a) $c\sqrt{2}$ इकाई
 - (b) 2c इकाई
 - (c) $2\sqrt{c}$ इकाई
 - (d) c इकाई
- 3. द्विघात समीकरण $x^2 + px q = 0$ के मूल बराबर होंगे, यदि :
 - (a) $p^2 = 4q$ (b) $p^2 = -4q$ (c) $p^2 = 2q$ (d) $p^2 = -2q$
- दो संख्याओं का HCF 27 तथा उनका LCM 162 है । यदि इनमें से एक संख्या 54 है, तो दूसरी संख्या है :
 - (a) 36
 (b) 45
 (c) 9
 (d) 81
- 5. दिन के किसी समय, एक व्यक्ति की ऊँचाई और उसकी छाया की लम्बाई एकसमान हैं । सूर्य का उन्नतांश (altitude) है :
 - (a) 30° (b) 45° (c) 60° (d) 90°
- 6. त्रिभुज ABC में, DE || BC है । यदि AD : DB = 2 : 3 हो, तो DE : BC बराबर है :

CLICK HERE

≫

2. The distance between the points (c, 0) and (0, -c) is :

- (a) $c\sqrt{2}$ units
- (b) 2c units
- (c) $2\sqrt{c}$ units
- (d) c units

3. The roots of the quadratic equation $x^2 + px - q = 0$ are equal, if :

(a)
$$p^2 = 4q$$
 (b) $p^2 = -4q$
(c) $p^2 = 2q$ (d) $p^2 = -2q$

4. The HCF of two numbers is 27 and their LCM is 162. If one of the numbers is 54, the other number is :

(a)	36	(b)	45
(c)	9	(d)	81

5. At some time of the day, the height and length of the shadow of a man are equal. The sun's altitude is :

(a)	30°	(b)	45°
(c)	60°	(d)	90°

6. In \triangle ABC, DE || BC. If AD : DB = 2 : 3, then DE : BC is equal to :

P.T.O.

- **7.** यदि एक A.P. का सार्व अन्तर 6 है, तो $a_{20} a_{14}$ का मान है :
 - (a) 36
 - (b) 6
 - (c) 36
 - (d) -6
- 8. दी गई आकृति में, केंद्र O वाले वृत्त पर PA और PB स्पर्श-रेखाएँ हैं । यदि ∠ APB = 50° है, तो ∠ AOB बराबर है :

- (a) 130° (b) 50°
- (c) 120° (d) 90°
- 9. निम्नलिखित बंटन के लिए

से कम अंक	छात्रों की संख्या
10	1
20	5
30	13
40	15
50	16

बहुलक वर्ग है :

(a)	30 - 40	(b)	40 - 50
(c)	20 – 30	(d)	10 - 20

430/C/3

CLICK HERE

>>

- 7. If common difference of an A.P. is -6, then value of $a_{20} a_{14}$ is :
 - (a) 36
 - (b) 6
 - (c) 36
 - (d) -6

8. In the given figure, PA and PB are tangents to a circle centred at O. If $\angle APB = 50^{\circ}$, then $\angle AOB$ is equal to :

9. For the following distribution

Marks below	Number of Students
10	1
20	5
30	13
40	15
50	16

the modal class is :

(a)	30 - 40	(b)	40 - 50

(c) 20-30 (d) 10-20

430/C/3

P.T.O.

10. यदि
$$\operatorname{cosec} A = \frac{7}{5}$$
 है, तो $\tan A \cdot \cos A$ का मान होगा :

(a)
$$\frac{7}{5}$$
 (b) $\frac{2\sqrt{6}}{5}$

(c)
$$\frac{24}{49}$$
 (d) $\frac{5}{7}$

- (a) $x(x^2 + 6)$ (b) 6x(x + 6)
- (c) $6x^2 1$ (d) $6(x^2 x)$
- 12. त्रिज्या r वाले उस वृत्तखंड, जिसका केंद्रीय कोण 90° है, का क्षेत्रफल है :
 - (a) $\frac{\pi r^2}{2} \frac{1}{2} r^2$ (b) $\frac{2\pi r}{4} - \frac{1}{2} r^2$ (c) $\frac{\pi r^2}{4} - \frac{1}{2} r^2$ (d) $\frac{2\pi r}{4} - r^2 \sin 90^\circ$

13. यदि $x = a \sin \theta$ और $y = b \cos \theta$ है, तो $b^2 x^2 + a^2 y^2$ बराबर है :

(a) 1 (b) $a^{2}b^{2}$ (c) $\frac{a^{2}+b^{2}}{a^{2}b^{2}}$ (d) $a^{2}+b^{2}$

a²b² 430/C/3 **~~~** Page 8

10. If cosec $A = \frac{7}{5}$, then value of tan $A \cdot \cos A$ is :

(a)
$$\frac{7}{5}$$
 (b) $\frac{2\sqrt{6}}{5}$

(c)
$$\frac{24}{49}$$
 (d) $\frac{5}{7}$

11. A quadratic polynomial having zeroes – 6 and 0 is :

- (a) $x(x^2 + 6)$ (b) 6x(x + 6)
- (c) $6x^2 1$ (d) $6(x^2 x)$

12. Area of a segment of a circle of radius r and central angle 90° is :

(a) $\frac{\pi r^2}{2} - \frac{1}{2} r^2$ (b) $\frac{2\pi r}{4} - \frac{1}{2} r^2$ (c) $\frac{\pi r^2}{4} - \frac{1}{2} r^2$ (d) $\frac{2\pi r}{4} - r^2 \sin 90^\circ$

13. If $x = a \sin \theta$ and $y = b \cos \theta$, then $b^2x^2 + a^2y^2$ is equal to :

(a) 1 (b) a^2b^2

(c)
$$\frac{a^2 + b^2}{a^2 b^2}$$
 (d) $a^2 + b^2$

430/C/3

P.T.O.

Page 9

- 14. रैखिक समीकरण युग्म 5x + 4y = 20 और 10x + 8y = 16:
 - (a) का कोई हल नहीं है
 - (b) के अपरिमित रूप से अनेक हल हैं
 - (c) का अद्वितीय हल है
 - (d) के दो हल हैं
- 15. शून्य बहुपद की घात :
 - (a)
 0 होती है
 (b)
 1 होती है
 - (c) कोई वास्तविक संख्या होती है (d) परिभाषित नहीं है
- **16.** त्रिज्याओं r_1 और r_2 ($r_2 > r_1$) वाले अर्धगोलाकार कटोरे का कुल पृष्ठीय क्षेत्रफल (आंतरिक तथा बाह्य) है :

17. 30 दिन के माह में 5 रविवारों के होने की प्रायिकता है :

(a)	$\frac{1}{7}$	(b)	$\frac{2}{7}$
(c)	$\frac{1}{15}$	(d)	$\frac{5}{30}$

18. यदि किसी बंटन के माध्य और बहुलक क्रमश: 17 और 20 हैं, तो मूलानुपाती सूत्र का उपयोग करके इस बंटन का माध्यक होगा :

- (a) 20 (b) $\frac{31}{3}$
- (c) 18 (d) 17
- 430/C/3 ~~~ Page 10

비었는
283
$\Box R c$

- 14. The pair of linear equations 5x + 4y = 20 and 10x + 8y = 16 has:
 - (a) no solution
 - (b) infinite number of solutions
 - (c) a unique solution
 - (d) two solutions
- **15.** Degree of a zero polynomial is :
 - (a) 0 (b) 1
 - (c) any real number (d) not defined
- 16. Total surface area (internal and external) of a hemispherical bowl having radii r_1 and r_2 ($r_2 > r_1$) is :

17. The probability that a month of 30 days has 5 Sundays, is

(a)	$\frac{1}{7}$	(b)	$\frac{2}{7}$
(c)	$\frac{1}{15}$	(d)	$\frac{5}{30}$

18. If the mean and the mode of a distribution are 17 and 20 respectively, then the median of the distribution, using empirical formula, is :

(a) 20 (b) $\frac{31}{3}$

430/C/3

Page 11

P.T.O.

प्रश्न संख्या 19 और 20 अभिकथन एवं तर्क आधारित प्रश्न हैं और प्रत्येक प्रश्न का 1 अंक है। दो कथन दिए गए हैं जिनमें एक को अभिकथन (A) तथा दूसरे को तर्क (R) द्वारा अंकित किया गया है। इन प्रश्नों के सही उत्तर नीचे दिए गए कोडों (a), (b), (c) और (d) में से चुनकर दीजिए।

- (a) अभिकथन (A) और तर्क (R) दोनों सही हैं और तर्क (R), अभिकथन (A) की सही व्याख्या करता है।
- (b) अभिकथन (A) और तर्क (R) दोनों सही हैं, परन्तु तर्क (R), अभिकथन (A) की सही व्याख्या नहीं करता है ।
- (c) अभिकथन (A) सही है, परन्तु तर्क (R) ग़लत है।
- (d) अभिकथन (A) ग़लत है, परन्तु तर्क (R) सही है।
- **19.** *अभिकथन (A)* : एक घटना होने की बहुत संभावना है यदि इसके घटने की प्रायिकता 0.9999 है ।

तर्क (R) : उस घटना, जिसका घटित होना निश्चित है, की प्रायिकता सदैव 1 होती है ।

20. अभिकथन (A) : केंद्र O वाले वृत्त पर PA और PB स्पर्श-रेखाएँ हैं और \angle OPA = 30° है । तब, \triangle PAB एक समबाहु त्रिभुज है ।

तर्क (R) : बाह्य बिंदु से वृत्त पर खींची गई स्पर्श-रेखाओं की लम्बाइयाँ बराबर होती हैं ।

430/C/3

Page 12

Questions number **19** and **20** are Assertion and Reason based questions carrying 1 mark each. Two statements are given, one labelled as Assertion (A) and the other is labelled as Reason (R). Select the correct answer to these questions from the codes (a), (b), (c) and (d) as given below.

- (a) Both Assertion (A) and Reason (R) are true and Reason (R) is the correct explanation of the Assertion (A).
- (b) Both Assertion (A) and Reason (R) are true, but Reason (R) is *not* the correct explanation of the Assertion (A).
- (c) Assertion (A) is true, but Reason (R) is false.
- $(d) \qquad Assertion \ (A) \ is \ false, \ but \ Reason \ (R) \ is \ true.$
- **19.** Assertion (A): An event is very likely to happen if its probability is 0.99999.
 - Reason(R): Probability of a sure event is always 1.
- **20.** Assertion (A): PA and PB are tangents to the circle centred at O and \angle OPA = 30°. Then, \triangle PAB is an equilateral triangle.
 - Reason(R): Lengths of tangents from an external point to a circle are equal in length.

430/C/3

Page 13

P.T.O.

खण्ड ख

इस खण्ड में अति लघु-उत्तरीय (VSA) प्रकार के प्रश्न हैं, जिनमें प्रत्येक के 2 अंक हैं।

- 21. तीन सिक्के एक साथ उछाले जाते हैं।
 - (i) सभी संभव परिणामों को लिखिए।
 - (ii) अधिक-से-अधिक 2 चित प्राप्त करने की प्रायिकता ज्ञात कीजिए।
- 22. एक वृत्त का केंद्र और त्रिज्या ज्ञात कीजिए जिसके व्यास के अंत्य बिंदु (3, -10) और (1, 4) हैं ।
- 23. बिंदुओं (-1, 1) और (5, 4) को जोड़ने वाले रेखाखण्ड को y-अक्ष जिस अनुपात में विभाजित करता है, उस अनुपात को ज्ञात कीजिए ।
- 24. (क) दर्शाइए कि किसी भी प्राकृत संख्या 'n' के लिए, संख्या 12^n , अंक 0 पर कभी भी समाप्त नहीं हो सकती है ।

अथवा

- (i) योगफल परिमेय संख्या हो ।
- (ii) गुणनफल अपरिमेय संख्या हो ।
- 25. (क) $A = 30^{\circ}$ और $B = 60^{\circ}$ के लिए, निम्नलिखित को सत्यापित कीजिए :

$$\tan (B - A) = \frac{\tan B - \tan A}{1 + \tan A \tan B}$$

अथवा

(ख) मान ज्ञात कीजिए :

 $\sin^2 60^\circ - 2\cos^2 45^\circ + \frac{1}{2}\csc^2 30^\circ$

430/C/3 ~~~~

>>>

SECTION B

This section comprises very short answer (VSA) type questions of 2 marks each.

- **21.** Three coins are tossed together.
 - (i) Write all possible outcomes.
 - (ii) Find the probability of having at most 2 heads.
- **22.** Find the centre and radius of a circle having end points of its diameter as (3, -10) and (1, 4).
- 23. Find the ratio in which a line segment joining the points (-1, 1) and (5, 4) is divided by the y-axis.
- **24.** (a) Show that 12^n can never end with a digit 0, where 'n' is a natural number.

OR

- (b) Give example of two irrational numbers whose
 - (i) sum is a rational number.
 - (ii) product is an irrational number.
- **25.** (a) For $A = 30^{\circ}$ and $B = 60^{\circ}$, verify that

$$\tan (B - A) = \frac{\tan B - \tan A}{1 + \tan A \tan B}$$

OR

(b) Evaluate :

 $\sin^2 60^\circ - 2 \cos^2 45^\circ + \frac{1}{2} \csc^2 30^\circ$ 430/C/3 ~~~ Page 15

SECTION E

This section comprises 3 case study based questions of 4 marks each.

Case Study – 1

36. A fashion designer is designing a fabric pattern. In each row, there are some shaded squares and unshaded triangles.

Based on the above, answer the following questions :

(i)	Identify A.P. for the number of	of squares in each row.	1
(ii)	Identify A.P. for the number of	f triangles in each row.	1
(iii)	(a) If each shaded square area when 15 rows hav	is of side 2 cm, then find the shade e been designed.	ed 2
	OR		
(iii)	(b) Write a formula for fin number of rows. Hence	nding total number of triangles in , find S_{10} .	ʻn' 2
430/C/3	~~~ Pag	e 23	P.T.O.

प्रकरण अध्ययन – 2

37. एक पेड़ की उम्र : एक पेड़ की उम्र निर्धारित करने का सबसे सटीक तरीका लकड़ी के विकास के वार्षिक छल्लों की गणना करना है । ऐसा ही एक ट्रंक यहाँ दिखाया गया है ।

एक पहचान चिह्न बनाने के लिए, वन विभाग ने खण्ड ACBA (चित्र देखें) चित्रित किया है। यदि जीवा AB केंद्र पर 90° का कोण बनाती है और ट्रंक की त्रिज्या 21 cm है, तो ज्ञात कीजिए :

Case Study – 2

37. Age of a tree : The most accurate way to determine the age of a tree is to count the annual rings of wood growth. One such trunk has been shown here.

To make an identification mark, the forest department has painted segment ACBA. (See diagram) If chord AB makes an angle 90° at the centre and radius of the trunk is 21 cm, then find the :

(i)	length of chord AB.	1
(ii)	area of \triangle OAB.	1
(iii)	(a) area of segment ACBA.	2
	OR	
(iii)	(b) perimeter of sector OACBO.	2
430/C/3	∼∼∼ Page 25	Р.Т.О.

38. टोटेम पोल बड़े पेड़ों से बनाए जाते हैं । इन खंभों (पोलों) को प्रतीकों या आकृतियों के साथ उकेरा गया है और ज्यादातर पश्चिमी कनाडा और उत्तर-पश्चिम संयुक्त राज्य अमेरिका में पाए जाते हैं ।

दिए गए चित्र में, समान ऊँचाई के दो खंभे 28 m की दूरी पर खड़े हैं। इन दोनों के बीच एक ही रेखा के एक बिंदु से, दोनों खंभों के शीर्ष के उन्नयन कोण क्रमश: 60° और 30° हैं।

उपर्युक्त के आधार पर, निम्नलिखित प्रश्नों के उत्तर दीजिए :

(i)	एक साफ नामांकित चित्र बनाइए ।	1
(ii)	(क) खंभों की ऊँचाई ज्ञात कीजिए।	2
	अथवा	
(ii)	(ख) यदि प्रेक्षणों के बिंदु से खंभों के शीर्ष की दूरियों को p तथा q के रूप में लिया जाता है, तो p और q के बीच संबंध ज्ञात कीजिए।	0
	ालया जाता ह, ता p आर q के बाच संबंध ज्ञात कार्जिए ।	2
(iii)	प्रेक्षण बिंदु का स्थान ज्ञात कीजिए ।	1

Case Study – 3

38. Totem poles are made from large trees. These poles are carved with symbols or figures and mostly found in western Canada and northwestern United States.

In the given picture, two such poles of equal heights are standing 28 m apart. From a point somewhere between them in the same line, the angles of elevation of the top of the two poles are 60° and 30° respectively.

Based on the above, answer the following questions :

(i)	Draw	y a neat labelled diagram.	1
(ii)	(a)	Find the height of the poles.	2
		OR	
(ii)	(b)	If the distances of the top of the poles from the point of observation are taken as p and q, then find a relation between p and q.	2
		between p and q.	2
(iii)	Find	the location of the point of observation.	1

| Gei | neral Instructions: -                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 1   | You are aware that evaluation is the most important process in the actual and correct assessment of the candidates. A small mistake in evaluation may lead to serious problems which may affect the future of the candidates, education system and teaching profession. To avoid mistakes, it is requested that before starting evaluation, you must read and understand the spot evaluation guidelines carefully.                                                                                                                                                                                                                                                                  |
| 2   | "Evaluation policy is a confidential policy as it is related to the confidentiality of the examinations conducted, Evaluation done and several other aspects. Its' leakage to public in any manner could lead to derailment of the examination system and affect the life and future of millions of candidates. Sharing this policy/document to anyone, publishing in any magazine and printing in News Paper/Website etc may invite action under various rules of the Board and IPC."                                                                                                                                                                                              |
| 3   | Evaluation is to be done as per instructions provided in the Marking Scheme. It should not be done according to one's own interpretation or any other consideration. Marking Scheme should be strictly adhered to and religiously followed. However, while evaluating, answers which are based on latest information or knowledge and/or are innovative, they may be assessed for their correctness otherwise and due marks be awarded to them. In class-X, while evaluating two competency-based questions, please try to understand given answer and even if reply is not from marking scheme but correct competency is enumerated by the candidate, due marks should be awarded. |
| 4   | The Marking scheme carries only suggested value points for the answers. These are in the nature of Guidelines only and do not constitute the complete answer. The students can have their own expression and if the expression is correct, the due marks should be awarded accordingly.                                                                                                                                                                                                                                                                                                                                                                                             |
| 5   | The Head-Examiner must go through the first five answer books evaluated by each evaluator on the first day, to ensure that evaluation has been carried out as per the instructions given in the Marking Scheme. If there is any variation, the same should be zero after delibration and discussion. The remaining answer books meant for evaluation shall be given only after ensuring that there is no significant variation in the marking of individual evaluators.                                                                                                                                                                                                             |
| 6   | Evaluators will mark( $$ ) wherever answer is correct. For wrong answer CROSS 'X" be marked. Evaluators will not put right ( $\checkmark$ ) while evaluating which gives an impression that answer is correct and no marks are awarded. This is most common mistake which evaluators are committing.                                                                                                                                                                                                                                                                                                                                                                                |
| 7   | If a question has parts, please award marks on the right-hand side for each part. Marks awarded for different parts of the question should then be totaled up and written in the left-hand margin and encircled. This may be followed strictly.                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 8   | If a question does not have any parts, marks must be awarded in the left-hand margin and encircled. This may also be followed strictly.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| If a student has attempted an extra question, answer of the question deserving more marks should be retained and the other answer scored out with a note " <b>Extra Question</b> ".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| No marks to be deducted for the cumulative effect of an error. It should be penalized only once.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| A full scale of marks80(example 0 to 80/70/60/50/40/30 marks as given in Question Paper) has to be used. Please do not hesitate to award full marks if the answer deserves it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Every examiner has to necessarily do evaluation work for full working hours i.e., 8 hours every day and evaluate 20 answer books per day in main subjects and 25 answer books per day in other subjects (Details are given in Spot Guidelines).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Ensure that you do not make the following common types of errors committed by the Examiner in the past:-<br>Giving more marks for an answer than assigned to it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

Same is with the X for incorrect answer.)</li> <li>Half or a part of answer marked correct and the rest as wrong, but no marks awarded.</li> <li>While evaluating the answer books if the answer is found to be totally incorrect, it should be marked as cross (X) and awarded zero (0)Marks.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Any un assessed portion, non-carrying over of marks to the title page, or totaling error detected by the candidate shall damage the prestige of all the personnel engaged in the evaluation work as also of the Board. Hence, in order to uphold the prestige of all concerned, it is again reiterated that the instructions be followed meticulously and judiciously.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| The Examiners should acquaint themselves with the guidelines given in the "Guidelines for spot Evaluation" before starting the actual evaluation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Every Examiner shall also ensure that all the answers are evaluated, marks carried over to the title page, correctly totaled and written in figures and words.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| The candidates are entitled to obtain photocopy of the Answer Book on request on payment of the prescribed processing fee. All Examiners/Additional Head Examiners/Head Examiners are once again reminded that they must ensure that evaluation is carried out strictly as per value points for each answer as given in the Marking Scheme.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 1                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|        | SECTION A                                                                                                   |                          |
|        | This section comprises multiple choice questions (MCQs) of 1 mark each                                      |                          |
| 1      | Two cubes each of 5 cm edge are joined end to end. The surface area of<br>the resulting cuboid is :         |                          |
|        | (a) $200 \text{ cm}^2$                                                                                      |                          |
|        | (b) $300 \text{ cm}^2$                                                                                      |                          |
|        | (c) $125 \text{ cm}^2$                                                                                      |                          |
|        | (d) $250 \text{ cm}^2$                                                                                      |                          |
| Answer | (d) 250 cm <sup>2</sup>                                                                                     | 1                        |
| 2      | The distance between the points $(c, 0)$ and $(0, -c)$ is :                                                 |                          |
|        | (a) $c\sqrt{2}$ units                                                                                       |                          |
|        | (b) 2c units                                                                                                |                          |
|        | (c) $2\sqrt{c}$ units                                                                                       |                          |
|        | (d) c units                                                                                                 |                          |
| Answer | (a) $c\sqrt{2}$ units                                                                                       | 1                        |
| 3      | The roots of the quadratic equation $x^2 + px - q = 0$ are equal, if:                                       |                          |
|        | (a) $p^2 = 4q$ (b) $p^2 = -4q$                                                                              |                          |
|        | (c) $p^2 = 2q$ (d) $p^2 = -2q$                                                                              |                          |
| Answer | (b) $p^2 = -4q$                                                                                             | 1                        |
| 4      | The HCF of two numbers is 27 and their LCM is 162. If one of the numbers is 54, the other number is :       |                          |
|        | (a) 36 (b) 45                                                                                               |                          |
|        | (c) 9 (d) 81                                                                                                |                          |
| Answer | (d) 81                                                                                                      | 1                        |
| 5      | At some time of the day, the height and length of the shadow of a man<br>are equal. The sun's altitude is : |                          |
|        | (a) $30^{\circ}$ (b) $45^{\circ}$                                                                           |                          |
|        | (c) 60° (d) 90°                                                                                             |                          |
| Answer | (b) 45 <sup>0</sup>                                                                                         | 1                        |

| 11     | A quadratic polynomial having zeroes – 6 and 0 is :                                                                  |   |
|        | (a) $x(x^2+6)$ (b) $6x(x+6)$                                                                                         |   |
|        | (c) $6x^2 - 1$ (d) $6(x^2 - x)$                                                                                      |   |
| Answer | (b) 6x(x+6)                                                                                                          | 1 |
| 12     | Area of a segment of a circle of radius r and central angle 90° is :                                                 |   |
|        | (a) $\frac{\pi r^2}{2} - \frac{1}{2}r^2$                                                                             |   |
|        | (b) $\frac{2\pi r}{4} - \frac{1}{2}r^2$                                                                              |   |
|        | (c) $\frac{\pi r^2}{4} - \frac{1}{2}r^2$                                                                             |   |
|        |                                                                                                                      |   |
|        | $(d)  \frac{2\pi r}{4} - r^2 \sin 90^\circ$                                                                          |   |
| Answer | (c) $\frac{\pi r^2}{4} - \frac{1}{2}r^2$                                                                             | 1 |
|        |                                                                                                                      |   |
| 13     | If $x = a \sin \theta$ and $y = b \cos \theta$ , then $b^2x^2 + a^2y^2$ is equal to :                                |   |
|        | (a) 1 (b) $a^2b^2$                                                                                                   |   |
|        | (c) $\frac{a^2 + b^2}{a^2b^2}$ (d) $a^2 + b^2$                                                                       |   |
|        | a"b"                                                                                                                 |   |
| Answer | (b) a <sup>2</sup> b <sup>2</sup>                                                                                    | 1 |
|        |                                                                                                                      |   |
| 14     | The pair of linear equations $5x + 4y = 20$ and $10x + 8y = 16$ has:                                                 |   |
|        | <ul> <li>(a) no solution</li> <li>(b) infinite number of solutions</li> </ul>                                        |   |
|        | (c) a unique solution                                                                                                |   |
|        | (d) two solutions                                                                                                    |   |
| Answer | (a) no solution                                                                                                      | 1 |
| ,      |                                                                                                                      | - |
| 15     | Degree of a zero polynomial is :                                                                                     |   |
|        | (a) 0 (b) 1                                                                                                          |   |
|        | (c) any real number (d) not defined                                                                                  |   |
|        |                                                                                                                      |   |
| Answer | (d) not defined                                                                                                      | 1 |
| 16     | Total surface area (internal and external) of a hemispherical bowl having radii $r_1$ and $r_2$ ( $r_2 > r_1$ ) is : |   |
|        |                                                                                                                      |   |
|        | (a) $2\pi(r_1^2 + r_2^2)$ (b) $\pi(r_1^2 + r_5^2)$                                                                   |   |
|        | (a) $2\pi (r_1^2 + r_2^2)$ (b) $\pi (r_1^2 + r_2^2)$<br>(c) $3\pi r_2^2 + \pi r_1^2$ (d) $3\pi r_1^2 + \pi r_2^2$    |   |
|        |                                                                                                                      |   |
|        |                                                                                                                      |   |

| 17     |                                                                                                                                     |   |
|--------|-------------------------------------------------------------------------------------------------------------------------------------|---|
| 17     | The probability that a month of 30 days has 5 Sundays, is                                                                           |   |
|        | (a) $\frac{1}{7}$ (b) $\frac{2}{7}$                                                                                                 |   |
|        |                                                                                                                                     |   |
|        | (c) $\frac{1}{15}$ (d) $\frac{5}{30}$                                                                                               |   |
|        |                                                                                                                                     |   |
| Answer | (b) $\frac{2}{7}$                                                                                                                   |   |
| 18     | 7                                                                                                                                   |   |
| 10     | If the mean and the mode of a distribution are 17 and 20 respectively,                                                              |   |
|        | then the median of the distribution, using empirical formula, is :                                                                  |   |
|        | (a) 20 (b) $\frac{31}{3}$                                                                                                           |   |
|        | (c) 18 (d) 17                                                                                                                       |   |
| Answer | (c) 18                                                                                                                              | 1 |
| 19     | Questions number 19 and 20 are Assertion and Reason based questions carrying                                                        |   |
|        | 1 mark each. Two statements are given, one labelled as Assertion (A) and the                                                        |   |
|        | other is labelled as Reason (R). Select the correct answer to these questions from                                                  |   |
|        | the codes (a), (b), (c) and (d) as given below.                                                                                     |   |
|        | (a) Both Assertion (A) and Reason (R) are true and Reason (R) is the                                                                |   |
|        | correct explanation of the Assertion (A).                                                                                           |   |
|        | (b) Both Assertion (A) and Reason (R) are true, but Reason (R) is <b>not</b>                                                        |   |
|        | the correct explanation of the Assertion (A).                                                                                       |   |
|        | (c) Assertion (A) is true, but Reason (R) is false.                                                                                 |   |
|        | (d) Assertion (A) is false, but Reason (R) is true.                                                                                 |   |
|        | Assertion (A): An event is very likely to happen if its probability is                                                              |   |
|        | 0.9999.                                                                                                                             |   |
|        | Reason(R): Probability of a sure event is always 1.                                                                                 |   |
| Answer | (b) Both Assertion (A) and Reason (R) are true, but Reason (R) is <b>not</b> the correct explanation of the Assertion (A).          | 1 |
| 20     | Assertion (A): PA and PB are tangents to the circle centred at O and                                                                |   |
|        | $\angle$ OPA = 30°. Then, $\triangle$ PAB is an equilateral triangle.                                                               |   |
|        | Reason(R): Lengths of tangents from an external point to a circle are                                                               |   |
|        | equal in length.                                                                                                                    |   |
|        | A                                                                                                                                   |   |
|        |                                                                                                                                     |   |
|        |                                                                                                                                     |   |
|        |                                                                                                                                     |   |
|        | B                                                                                                                                   |   |
| Answer | (a) Both Assertion (A) and Reason (R) are true, and Reason (R) is the correct explanation of                                        | 1 |
| Answer | <ul> <li>(a) Both Assertion (A) and Reason (R) are true, and Reason (R) is the correct explanation of the Assertion (A).</li> </ul> | 1 |

| 27(a)           | Prove that $2 + 3\sqrt{3}$ is an irrational number. It is given that $\sqrt{3}$ is an irrational number.                                                                        |                                                              |
| Solution<br>(a) | Let us assume that $2 + 3\sqrt{3}$ is a rational number<br>$2 + 3\sqrt{3} = \frac{p}{q}$ ; p, q are integers and $q \neq 0$                                                     | 1                                                            |
|                 | $\Rightarrow \sqrt{3} = \frac{p - 2q}{3q}$                                                                                                                                      | 1                                                            |
|                 | RHS is rational but LHS is irrational $\therefore$ Our assumption is wrong.                                                                                                     |                                                              |
|                 | Hence $2 + 3\sqrt{3}$ is an irrational number                                                                                                                                   | 1                                                            |
| (b)             | OR Prove that $\sqrt{5}$ is an irrational number                                                                                                                                |                                                              |
| Solution<br>(b) | Let us assume that $\sqrt{5}$ is a rational number<br>$\sqrt{5} = \frac{p}{q}$ ; p, q are coprime and $q \neq 0$                                                                |                                                              |
|                 | $\sqrt{5}q = p \implies 5q^2 = p^2$ (i)<br>p <sup>2</sup> is divisible by 5. So, p is divisible by 5.                                                                           | 1                                                            |
|                 | $p = 5c \implies p^2 = 25c^2$ (ii)<br>Putting p <sup>2</sup> in eqn.(i) $\implies q^2 = 5c^2$ . So, q is divisible by 5.                                                        | 1/2                                                          |
|                 | Thus, p and q have a common factor 5, which is a contradiction $\therefore$ our assumption is incorrect.                                                                        | 1<br>1⁄2                                                     |
|                 | Therefore, $\sqrt{5}$ is an irrational number.                                                                                                                                  |                                                              |

|----------|-------------------------------------------------------------------------------------------------------|--------------|
|          | 7 chairs and 4 tables for a classroom together cost ₹ 7,000; while                                    |              |
|          | 5 chairs and 3 tables together cost $\neq$ 5,080. Find the cost of each                               |              |
|          | chair and each table.                                                                                 |              |
| Solution | Let the cost of one chair be ₹ x and that of one table be ₹ y                                         |              |
| (b)      | 7x+4y=7000(i)                                                                                         | 1 ½          |
|          | 5x+3y=5080(ii)                                                                                        | 1 ½          |
|          |                                                                                                       | - /2         |
|          | Solving (i) and (ii)                                                                                  |              |
|          | x = 680 and $y = 560$                                                                                 | 1+1          |
| 34       | Cost of each chair = ₹ 680 and cost of each table = ₹ 560                                             |              |
| 54       | Prove that the lengths of the tangents drawn from an external point to a circle are equal.            |              |
| Solution |                                                                                                       |              |
|          |                                                                                                       |              |
|          |                                                                                                       |              |
|          |                                                                                                       | 1 for figure |
|          | Civen: TD and TO are two tengents drawn from an automal point T to the                                | 1            |
|          | Given : TP and TQ are two tangents drawn from an external point T to the circle C(O,r)                | 1            |
|          | To prove: $TP = TQ$                                                                                   |              |
|          | Proof: In $\triangle$ OPT and $\triangle$ OQT                                                         |              |
|          | OT = OT (common)                                                                                      |              |
|          | $\angle OPT = \angle OQT = 90^{\circ}$ (Tangent and radius are perpendicular at point of contact)     | 2            |
|          | OP = OQ (radii of the same circle)                                                                    |              |
|          | $\therefore \Delta \text{ OPT} \cong \Delta \text{ OQT}  (\text{RHS congruence})$                     |              |
|          | $\therefore TP = TQ (by c.p.c.t)$                                                                     | 1            |
|          | So, length of the tangents drawn from an external point to circle are equal.                          |              |
| 35       | In the given figure, $\angle ACB = 90^{\circ}$ and $CD \perp AB$ . Prove that $CD^2 = BD \times AD$ . |              |
|          | C                                                                                                     |              |
|          | A D B                                                                                                 |              |
| Solution | $Let \angle A = \theta$                                                                               |              |
|          | $\Rightarrow \angle ACD = 90^{\circ} - \theta \therefore \angle BCD = \theta$ (i)                     | 1            |
|          | $\therefore$ In $\triangle$ CDA and $\triangle$ BDC                                                   |              |
|          | $\angle A = \angle BCD$ (using (i))                                                                   | 2            |
|          | $\angle CDA = \angle BDC = 90^{\circ}$                                                                | -            |
|          | $\therefore \Delta CDA \square \Delta BDC  [AA similarity criterion]$                                 |              |
|          |                                                                                                       |              |
|          |                                                                                                       |              |
|          |                                                                                                       |              |
