# WORK, POWER & ENERGY

WORK DONE BY CONSTANT FORCE :

**W** = F . S

WORK DONE BY MULTIPLE FORCES

 $\Sigma \vec{F} = \vec{F}_1 + \vec{F}_2 + \vec{F}_3 + \dots$   $W = [\Sigma \vec{F}] \cdot \vec{S} \qquad \dots (i)$   $W = \vec{F}_1 \cdot \vec{S} + \vec{F}_2 \cdot \vec{S} + \vec{F}_3 \cdot \vec{S} + \dots$   $W = W_1 + W_2 + W_2 + \dots$ 

or

WORK DONE BY A VARIABLE FORCE

 $dW = \vec{F}.d\vec{s}$ 

### RELATION BETWEEN MOMENTUM AND KINETIC ENERGY

 $K = \frac{p^2}{2m}$  and  $P = \sqrt{2mK}$ ; P = linear momentum

POTENTIAL ENERGY

$$\begin{split} &\int_{U_1}^{U_2} dU = -\int_{r_1}^{r_2} \vec{F} \cdot d\vec{r} \qquad \text{ i.e., } \qquad U_2 - U_1 = -\int_{r_1}^{r_2} \vec{F} \cdot d\vec{r} = -W \\ &U = -\int_{\infty}^{r} \vec{F} \cdot d\vec{r} = -W \end{split}$$

**CONSERVATIVE FORCES** 

$$F = -\frac{\partial U}{\partial r}$$

## WORK-ENERGY THEOREM

 $W_{c} + W_{NC} + W_{PS} = \Delta K$ 

### Modified Form of Work-Energy Theorem

### POWER

The average power (  $\overline{P} \,$  or  $p_{_{av}})$  delivered by an agent is given by  $\overline{P} \,$  or

$$p_{av} = \frac{W}{t}$$
$$P = \frac{\vec{F} \cdot d\vec{S}}{dt} = \vec{F} \cdot \frac{d\vec{S}}{dt} = \vec{F} \cdot \vec{v}$$
