

Sample Question Paper - 4
Class- IX Session- 2021-22
TERM 1
Subject- Mathematics

Time Allowed: 1 hour and 30 minutes

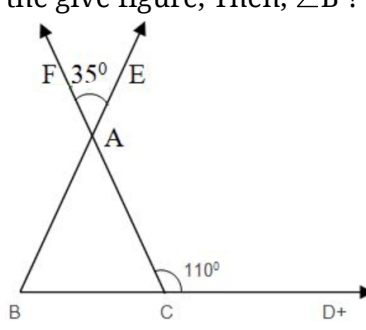

Maximum Marks: 40

General Instructions:

1. The question paper contains three parts A, B and C.
2. Section A consists of 20 questions of 1 mark each. Attempt any 16 questions.
3. Section B consists of 20 questions of 1 mark each. Attempt any 16 questions.
4. Section C consists of 10 questions based on two Case Studies. Attempt any 8 questions.
5. There is no negative marking.

Section A

Attempt any 16 questions

1. $\frac{\sqrt{3}+\sqrt{2}}{\sqrt{3}-\sqrt{2}} + \frac{\sqrt{3}-\sqrt{2}}{\sqrt{3}+\sqrt{2}} =$ [1]
a) 8 b) -10
c) 10 d) -8
2. The equation $y = 2x - 7$ has [1]
a) no solution b) two solutions
c) one solution d) many solutions
3. The sides BC, BA and CA of $\triangle ABC$ have been produced to D, E and F respectively, as shown in the give figure, Then, $\angle B$? [1]

a) 55° b) 65°
c) 75° d) 35°
4. Length of perpendicular drawn on smallest side of scalene triangle is [1]
a) largest b) No relation
c) smallest d) Equal
5. If $\sqrt{10} = 3.162$, then the value of $\frac{1}{\sqrt{10}}$ is [1]
a) 0.3162 b) 31.62

c) 0.003162

d) 3.162

6. $x = 5$ and $y = -2$ is the solution of the linear equation. [1]

a) $x + 3y = 1$

b) $2x + y = 9$

c) $3x + y = 0$

d) $2x - y = 12$

7. In the given figure, $AB \parallel DC$, $\angle BAD = 90^\circ$, $\angle CBD = 28^\circ$ and $\angle BCE = 65^\circ$. Then $\angle ABD = ?$ [1]

a) 43°

b) 53°

c) 32°

d) 37°

8. In the adjoining figure, $AB = FC$, $EF = BD$ and $\angle AFE = \angle CBD$. Then the rule by which [1]

a) SSS

b) AAS

c) ASA

d) SAS

9. If $x = 2 + \sqrt{3}$, then $x + \frac{1}{x} =$ [1]

a) 4

b) -5

c) -4

d) 5

10. Which one of the following is not the graphical representation of statistical data? [1]

a) Histogram

b) Cumulative frequency distribution

c) Frequency polygon

d) Bar graph

11. Side BC of $\triangle ABC$ has been produced to D on left-hand side and to E on right-hand side such that $\angle ABD = 125^\circ$ and $\angle ACE = 130^\circ$. Then $\angle A = ?$ [1]

a) 55°

b) 50°

c) 75°

d) 65°

12. If $(3^3)^2 = 9^x$ then $5^x = ?$ [1]

a) 25

b) 5

- c) 1 d) 125
13. After rationalising the denominator of $\frac{7}{3\sqrt{3}-2\sqrt{2}}$, we get the denominator as [1]
- a) 5 b) 35
- c) 19 d) 13
14. In the adjoining figure, the three lines AB, CD and EF all pass through the point O. If $\angle EOB = 90^\circ$ and $x:y = 2:1$ then $\angle BOD$ and $\angle COE$:- [1]
-
- a) $60^\circ, 60^\circ$ b) $30^\circ, 60^\circ$
- c) $80^\circ, 20^\circ$ d) $45^\circ, 45^\circ$
15. The point on the graph of the linear equation $2x + 5y = 19$, whose ordinate is $1\frac{1}{2}$ times its abscissa is [1]
- a) (-2, -3) b) (2, 3)
- c) none of these d) (4, 6)
16. Mode of a set of observations is the value which [1]
- a) is the sum of the observations b) divides the observations into two equal parts
- c) is the mean of the middle two observations d) occurs most frequently
17. The sides of a triangle are 11 m, 60 m and 61 m. The altitude to the smallest side is [1]
- a) 60 m b) 66 m
- c) 11 m d) 50 m
18. The class marks of a frequency distribution are given as follows 15, 20, 25 the class corresponding to the class mark 20 is [1]
- a) 19.5 - 20.5 b) 12.5 - 17.5
- c) 18.5 - 21.5 d) 17.5 - 22.5
19. The simplest rationalising factor of $2\sqrt{5} - \sqrt{3}$, is [1]
- a) $\sqrt{5} + \sqrt{3}$ b) $2\sqrt{5} + 3$
- c) $\sqrt{5} - \sqrt{3}$ d) $2\sqrt{5} + \sqrt{3}$
20. AB and CD are two parallel lines. PQ cuts AB and CD at E and F respectively. EL is the bisector of $\angle FEB$. If $\angle LEB = 35^\circ$, then $\angle CFQ$ will be [1]
- a) 130° b) 70°
- c) 110° d) 55°

Section B

Attempt any 16 questions

21. If (4, 19) is a solution of the equation $y = ax + 3$, then $a =$ [1]
 a) 4 b) 6
 c) 3 d) 5
22. The product of difference of semi-perimeter & respective sides of $\triangle ABC$ are given as $13200 m^2$. The area of $\triangle ABC$, if its semi-perimeter is 132 m, is given by [1]
 a) $1320 m^2$ b) $13200 m^2$
 c) $132 m^2$ d) $20\sqrt{33} m^2$
23. The point of the form (a, -a), where a lies on [1]
 a) the x-axis b) the line $x = y$
 c) the line $y + x = 0$ d) the y-axis
24. Two angles measure $(70 + 2x)^\circ$ and $(3x - 15)^\circ$. If each angle is the supplement of the other, then the value of x is : [1]
 a) 30 b) 20
 c) 250° d) 25
25. The value of $x - y^{x-y}$ when $x = 2$ and $y = -2$, is [1]
 a) 14 b) -18
 c) 18 d) -14
26. Each side of an equilateral triangle is 10 cm long. The height of the triangle is [1]
 a) $10\sqrt{3}$ cm b) $10\sqrt{2}$ cm
 c) $5\sqrt{3}$ cm d) 5 cm
27. The mean of first n natural numbers is [1]
 a) $\frac{n-1}{2}$ b) $\frac{n(n+1)}{2}$
 c) $\frac{n+1}{2}$ d) $\frac{n(n-1)}{2}$
28. The value of $\sqrt{20} \times \sqrt{5}$ is [1]
 a) $20\sqrt{5}$ b) $4\sqrt{5}$
 c) $2\sqrt{5}$ d) 10
29. In the adjoining figure, the bisectors of $\angle CBD$ and $\angle BCE$ meet at the point O. If $\angle BAC = 70^\circ$, then $\angle BOC$ is equal to :- [1]

- a) 11° b) 55°
 c) 70° d) 35°

30. A grouped frequency distribution table with classes of equal sizes using 105-120 (120 not included) as one of the class intervals is constructed for the following data: The number of classes in the distribution will be [1]

125	126	140	98	128	78	108	67
87	149	102	136	145	112	103	84
123	130	120	89	103	65	96	65

- a) 7
b) 4
c) 5
d) 6
31. Area of an isosceles triangle ABC with $AB = a = AC$ and $BC = b$ is [1]
 a) $\frac{1}{4}b\sqrt{4a^2 - b^2}$
 b) $\frac{1}{4}b\sqrt{a^2 - b^2}$
 c) $\frac{1}{2}b\sqrt{4a^2 - b^2}$
 d) $\frac{1}{2}b\sqrt{a^2 - b^2}$
32. The value of $(x^{a-b})^{a+b} \times (x^{b-c})^{b+c} \times (x^{c-a})^{c+a}$ is [1]
 a) 3
 b) 2
 c) 1
 d) 0
33. The sides BC, CA and AB of $\triangle ABC$ have been produced to D, E and F respectively. $\angle BAE + \angle CBF + \angle ACD = ?$ [1]

- a) 240°
 b) 360°
 c) 300°
 d) 320°
34. Tally are usually marked in a bunch of [1]
 a) 5
 b) 4
 c) 3
 d) 6
35. If $\angle A = 4\angle B = 6\angle C$, then $A : B : C$? [1]
 a) 3 : 4 : 6
 b) 2 : 3 : 4
 c) 6 : 4 : 3
 d) 12 : 3 : 2
36. The line represented by the equation $x + y = 16$ passes through (2, 14). How many more lines [1]
 pass through the point (2, 14)
 a) 10
 b) 2
 c) many
 d) 100

c) I

d) IV

Solution

Section A

1. (c) 10

Explanation: $\frac{\sqrt{3}+\sqrt{2}}{\sqrt{3}-\sqrt{2}} + \frac{\sqrt{3}-\sqrt{2}}{\sqrt{3}+\sqrt{2}}$
 $\Rightarrow \frac{(\sqrt{3}+\sqrt{2})^2 + (\sqrt{3}-\sqrt{2})^2}{(\sqrt{3}-\sqrt{2})(\sqrt{3}+\sqrt{2})}$
 $\Rightarrow \frac{(3+2+2\sqrt{6}) + (3+2-2\sqrt{6})}{3-2}$
 $\Rightarrow 10$

2. (d) many solutions

Explanation: $y = 2x - 7$

Has many solution because for different value of x we have different value of y for example.

At $x = 1$

$y = 2(1) - 7$

$y = 2 - 7$

$y = -5$

at $x = 2$

$y = 2(2) - 7$

$y = 4 - 7$

$y = -3$

So we can say for many value of x there is many value of y.

3. (c) 75°

Explanation: $\angle FAE = \angle BAC$ (VOA)

$\angle BAC = 35^\circ$

$\angle ACB + \angle ACD = 180^\circ$ (Linear Pair)

$\angle ACB + 110^\circ = 180^\circ$

$\angle ACB = 180^\circ - 110^\circ$

$\angle ACB = 70^\circ$

$\angle BAC + \angle B + \angle ACB = 180^\circ$

$35^\circ + \angle B + 70^\circ = 180^\circ$

$\angle B + 105^\circ = 180^\circ$

$\angle B = 180^\circ - 105^\circ$

$\angle B = 75^\circ$

4. (a) largest

Explanation:

Length of the perpendicular drawn on the smallest side of the scalene triangle is largest.

5. (a) 0.3162

Explanation: $\frac{1}{\sqrt{10}}$
 $= \frac{1}{\sqrt{10}} \times \frac{\sqrt{10}}{\sqrt{10}}$
 $= \frac{\sqrt{10}}{10}$

$$= \frac{3.162}{10}$$

$$= 0.3162$$

6. **(d)** $2x - y = 12$

Explanation: $x = 5$ and $y = -2$ is the solution of the linear equation $2x - y = 12$

$$2x - y = 12$$

$$\text{LHS} = 2x - y$$

$$2.5 - (-2)$$

$$10 + 2$$

$$12$$

$$\text{RHS} = 12$$

$$\text{LHS} = \text{RHS}$$

It means that $x = 5$ and $y = -2$ is the solution of the linear equation $2x - y = 12$.

7. **(d)** 37°

Explanation: In $\triangle DBC$

$$\angle BCE = \angle DBC + \angle BDC \quad (\text{Exterior angle property})$$

$$65^\circ = 28^\circ + \angle BDC$$

$$\angle BDC = 37$$

As, AB is parallel to CD

$$\angle ABD = \angle BDC = 37^\circ \quad (\text{Alternate interior angle})$$

8. **(d)** SAS

Explanation: In $\triangle DBC$ and $\triangle AEF$, we have

$AB = FC$ (given) by adding BF on both sides

$AF = CB$

$$\angle AFE = \angle CBD \quad (\text{given})$$

$$EF = BD \quad (\text{given})$$

Hence, $\triangle AFE \cong \triangle CBD$ by SAS as the corresponding sides and their included angles are equal.

9. **(a)** 4

Explanation: $x + \frac{1}{x}$

$$\Rightarrow \frac{x^2 + 1}{x}$$

now, put $x = 2 + \sqrt{3}$

we have,

$$\frac{(2 + \sqrt{3})^2 + 1}{2 + \sqrt{3}}$$

$$\Rightarrow \frac{4 + 3 + 2(2\sqrt{3}) + 1}{2 + \sqrt{3}}$$

$$\Rightarrow \frac{8 + 4\sqrt{3}}{2 + \sqrt{3}}$$

$$\Rightarrow \frac{4(2 + \sqrt{3})}{2 + \sqrt{3}}$$

$$= 4$$

10. **(b)** Cumulative frequency distribution

Explanation: Technically, a cumulative frequency distribution is the sum of the class and all classes below it in a frequency distribution.

11. **(c)** 75°

Explanation: $\angle ABD + \angle ABC = 180^\circ$ (Linear Pair)

$$\angle ABC = 180^\circ - 125^\circ = 55^\circ$$

$\angle ACE + \angle ACB = 180^\circ$ (Linear Pair)

$$\angle ACB = 180^\circ - 130^\circ = 50^\circ$$

In $\triangle ABC$

$\angle ABC + \angle ACB + \angle BAC = 180^\circ$ (Angle sum property)

$$\angle BAC = 180^\circ - 50^\circ - 55^\circ$$

$$\angle BAC = 75^\circ$$

12. (d) 125

Explanation: $(3^3)^2 = 9^x$

$$(3^2)^3 = 9^x$$

$$9^3 = 9^x$$

$$\Rightarrow x=3$$

$$\therefore 5^3 = 125$$

13. (c) 19

Explanation: After rationalizing:

$$\begin{aligned} \frac{7}{3\sqrt{3}-2\sqrt{2}} &= \frac{7}{3\sqrt{3}-2\sqrt{2}} \times \frac{3\sqrt{3}+2\sqrt{2}}{3\sqrt{3}+2\sqrt{2}} \\ &= \frac{7(3\sqrt{3}+2\sqrt{2})}{(3\sqrt{3})^2 - (2\sqrt{2})^2} \\ &= \frac{7(3\sqrt{3}+2\sqrt{2})}{27-8} \\ &= \frac{7(3\sqrt{3}+2\sqrt{2})}{19} \end{aligned}$$

14. (b) 30°, 60°

Explanation: $x + y + 90^\circ = 180^\circ$ (Linear Pair)

$$2a + a + 90^\circ = 180^\circ \text{ (Since, } x:y = 2:1)$$

$$a = 30^\circ$$

$$x = 2a = \angle COE = 60^\circ \text{ (Vertically opposite angles)}$$

$$y = \angle BOD = 30^\circ \text{ (Vertically opposite angles)}$$

15. (b) (2, 3)

Explanation: Ordinate means y-coordinate. It means we need to find a point on the given line where y-coordinate = 3/2 (x-coordinate). Just put $y = \left(\frac{3}{2}\right) \cdot x$ in the given eqn.

$$2x + 5 \cdot \frac{3}{2}x = 19$$

$$2x + \frac{15}{2}x = 19$$

$$\frac{4x+15x}{2} = 19$$

$$\frac{19x}{2} = 19$$

$$x = \frac{19 \times 2}{19}$$

$$y = \frac{3}{2}x$$

$$y = \frac{3}{2} \times 2$$

$$y=3$$

so the co-ordinate are (2,3)

16. (d) occurs most frequently

Explanation: In statistics, the mode in a list of numbers refers to the integers that occurs most number of times.

17. (a) 60 m

Explanation: Area of $\Delta = \frac{1}{2}$ Base \times Height

The smallest side is 11 m

$$\text{Area} = \frac{1}{2} \times 11 \times \text{Height} \dots (i)$$

$$\text{Area by Heron's Formula} = \sqrt{s(s-a)(s-b)(s-c)}$$

$$s = \frac{11+60+61}{2} = 66 \text{ m}$$

$$\text{Area} = \sqrt{66 \times 55 \times 6 \times 5} = 330 \text{ m}^2$$

From eq (i)

$$330 = \frac{1}{2} \times 11 \times \text{height}$$

$$\text{Height} = \frac{2 \times 330}{11} = 60 \text{ m}$$

18. (d) 17.5 - 22.5

Explanation: Clearly, Lower limit of the class corresponding to class mark 20 = $\frac{\text{Class mark of preceding class} + 20}{2}$

$$= \frac{15+20}{2} = 17.5$$

$$\begin{aligned} \text{Upper limit of the class corresponding to the class mark } 20 &= \frac{20 + \text{Class mark of succeeding class}}{2} \\ &= \frac{20 + 25}{2} = \frac{45}{2} = 22.5 \end{aligned}$$

Hence the required class is 17.5 - 22.5

19. (d) $2\sqrt{5} + \sqrt{3}$

Explanation: $2\sqrt{5} - \sqrt{3}$
 $= (2\sqrt{5} - \sqrt{3})(2\sqrt{5} + \sqrt{3})$
 $= (2\sqrt{5})^2 - (\sqrt{3})^2$
 $= 20 - 3$
 $= 17$

17 is rational number

\therefore rationalizing factor of $2\sqrt{5} - \sqrt{3}$ is $2\sqrt{5} + \sqrt{3}$

20. (c) 110°

Explanation:

It is given that, $AB \parallel CD$ with PQ as transversal.

Also, EL is the bisector $\angle BEF$ and $\angle LEB = 35^\circ$

We need to find $\angle CFQ$

Therefore,

$$\angle BEF = 2(\angle LEB)$$

$$\angle BEF = 2(35^\circ)$$

$$\angle BEF = 70^\circ \dots (i)$$

We have $AB \parallel CD$, $\angle BEF$ and $\angle DFE$ are consecutive interior angles, which must be supplementary.

$$\angle BEF + \angle DFE = 180^\circ$$

From equation (i), we get:

$$70^\circ + \angle DFE = 180^\circ$$

$$\angle DFE = 180^\circ - 70^\circ$$

$$\angle DFE = 110^\circ \dots (ii)$$

We have $\angle CFQ$ and $\angle DFE$ as vertically opposite angles.

Therefore,

$$\angle CFQ = \angle DFE$$

$$\angle CFQ = 110^\circ$$

Section B

21. (a) 4

Explanation: Given, (4, 19) is a solution of the equation $y = ax + 3$

$$19 = 4a + 3$$

$$a = 4$$

22. (a) $1320 m^2$

Explanation: Given: $(s - a)(s - b)(s - c) = 13200$ m and $s = 132$ m

$$\text{Area of triangle} = \sqrt{s(s - a)(s - b)(s - c)}$$

$$= \sqrt{13200 \times 132}$$

$$= 1320 \text{ sq. m}$$

23. (c) the line $y + x = 0$

Explanation: The point $(a, -a)$ lies on line $x + y = 0$

Here is the verification

Put $x = a$ in equation

$$x + y = 0$$

$$a + y = 0$$

$$y = -a$$

Hence it is prove that $(a, -a)$ is a solution of $x + y = 0$

24. (d) 25

Explanation: $70 + 2x + 3x - 15 = 180$ (Supplimentary angles)

$$5x = 180 - 55$$

$$x = 25$$

25. (d) -14

Explanation: $x = 2, y = -2$

$$x - y^{x-y} = 2 - (-2)^{2-(-2)}$$

$$= 2 - (-2)^{2+2}$$

$$= 2 - (-2)^4$$

$$= 2 - (+16)$$

$$= 2 - 16$$

$$= -14$$

26. (c) $5\sqrt{3}$ cm

Explanation: Height of equilateral triangle = $\frac{\sqrt{3}}{2} \times \text{Side}$

$$= \frac{\sqrt{3}}{2} \times 10$$

$$= 5\sqrt{3}\text{cm}$$

27. (c) $\frac{n+1}{2}$

Explanation: The mean is equal to the sum of all the values in the data set divided by the number of values in the data set.

Sum of first n natural numbers is $\frac{n(n+1)}{2}$

So, mean of first n natural numbers is $\frac{\frac{n(n+1)}{2}}{n} = \frac{(n+1)}{2}$

28. (d) 10

Explanation: $\sqrt{20} \times \sqrt{5}$

$$= 2\sqrt{5} \times \sqrt{5}$$

$$= 2 \times 5$$

$$= 10$$

29. (b) 55°

Explanation: $\angle BOC = 90^\circ - \frac{1}{2} \angle BAC$

$$\angle BOC = 90^\circ - 35^\circ = 55^\circ$$

30. (d) 6

Explanation: Maximum value of the observation is 149 & minimum value is 65.

This range of data need to grouped into classes of equal sizes with 105-120 as one class.

Thus we need to construct classes of width 15.

Below 6 classes can be constructed

60-75, 75-90, 90-105, 105-120, 120-135, 135-150

31. (a) $\frac{1}{4}b\sqrt{4a^2 - b^2}$

Explanation: Here $s = \frac{a+a+b}{2} = \frac{2a+b}{2}$

Area of triangle = $\sqrt{s(s-a)(s-b)(s-c)}$

$$= \sqrt{\frac{2a+b}{2} \left(\frac{2a+b}{2} - a \right) \left(\frac{2a+b}{2} - a \right) \left(\frac{2a+b}{2} - b \right)}$$

$$= \sqrt{\frac{2a+b}{2} \left(\frac{b}{2}\right) \left(\frac{b}{2}\right) \left(\frac{2a-b}{2}\right)}$$

$$= \frac{b}{4} \sqrt{4a^2 - b^2}$$

32. (c) 1

Explanation: $(x^{a-b})^{a+b} \times (x^{b-c})^{b+c} \times (x^{c-a})^{c+a}$
 $\Rightarrow x^{a^2-b^2} \times x^{b^2-c^2} \times x^{c^2-a^2}$
 $\Rightarrow x^{a^2-b^2+b^2-c^2+c^2-a^2}$
 $\Rightarrow x^0 = 1$

33. (b) 360°

Explanation: We have :
 $\angle 1 + \angle BAE = 180^\circ \dots(i)$
 $\angle 2 + \angle CBF = 180^\circ \dots(ii)$
 $\angle 3 + \angle ACD = 180^\circ \dots(iv)$
Adding (i),(ii) and (iii), we get:
 $(\angle 1 + \angle 2 + \angle 3) + (\angle BAE + \angle CBF + \angle ACD) = 540^\circ$
 $\Rightarrow 180^\circ + \angle BAE + \angle CBF + \angle ACD = 540^\circ$ [$\because \angle 1 + \angle 2 + \angle 3 = 180^\circ$]
 $\Rightarrow \angle BAE + \angle CBF + \angle ACD = 360^\circ$.

34. (a) 5

Explanation: Tally are usually marked in a bunch of 5: 4 in a vertical line and one is placed diagonally.

35. (d) 12 : 3 : 2

Explanation: Let A be x
 $B = \frac{1}{4}x$
 $C = \frac{1}{6}x$
A : B : C
 $x : \frac{1}{4}x : \frac{1}{6}x$
LCM of 4 and 6 is 12
12 : 3 : 2

36. (c) many

Explanation: There are many lines pass through the point (2, 14).
For example
 $x - y = -12$
 $2x + y = 18$
and many more.

37. (d) 47

Explanation: Let if $l_1 \parallel l_2$ and AB is tranverse to it
Then,
 $\angle PBA$ should be equal to $\angle BAS$ (Alternate angles)
So if $l_1 \parallel l_2$, then $\angle BAS = 70^\circ$
 $\Rightarrow \angle BAC = 78^\circ - 35^\circ = 43^\circ$..(i)
Now, in $\triangle ABC$
 $x^\circ + \angle C + \angle BAC = 180^\circ$
 $\Rightarrow x^\circ + 90^\circ + 43^\circ = 180^\circ$
 $\Rightarrow x^\circ = 180^\circ - 90^\circ - 43^\circ = 47^\circ$
 $\Rightarrow x^\circ = 47^\circ$
So if $x^\circ = 47^\circ$ then $l_1 \parallel l_2$

38. (a) $\frac{4}{3}$

Explanation: $\frac{\sqrt{48} + \sqrt{32}}{\sqrt{27} + \sqrt{18}}$

$$\begin{aligned}
&= \frac{\sqrt{4 \times 4 \times 3} + \sqrt{4 \times 4 \times 2}}{\sqrt{3 \times 3 \times 3} + \sqrt{3 \times 3 \times 2}} \\
&= \frac{4\sqrt{3} + 4\sqrt{2}}{3\sqrt{3} + 3\sqrt{2}} \\
&= \frac{4(\sqrt{3} + \sqrt{2})}{3(\sqrt{3} + \sqrt{2})} \\
&= \frac{4}{3}
\end{aligned}$$

39. **(b)** horizontal axis and vertical axis

Explanation: In a histogram the class limits are marked on the horizontal axis and the frequency is marked on the vertical axis. Thus, a rectangle is constructed on each class interval.

40. **(d)** 0

Explanation: If \bar{X} be the mean of the n observations of X_1, \dots, X_n then we have

$$\begin{aligned}
\bar{X} &= \frac{1}{n} \sum_{i=1}^n X_i \\
\Rightarrow \sum_{i=1}^n X_i &= n\bar{X}
\end{aligned}$$

Let \bar{X} be the mean of n values X_1, \dots, X_n . So, we have

$$\begin{aligned}
\bar{X} &= \frac{1}{n} \sum_{i=1}^n X_i \\
\Rightarrow \sum_{i=1}^n X_i &= n\bar{X}
\end{aligned}$$

The sum of the deviations of n values X_1, \dots, X_n from their mean \bar{X} is

$$\begin{aligned}
&(x_1 - \bar{X}) + (x_2 - \bar{X}) + \dots + (x_n - \bar{X}) \\
&= \sum_{i=1}^n (x_i - \bar{X}) \\
&= \sum_{i=1}^n x_i - \sum_{i=1}^n \bar{X} \\
&= n\bar{X} - n\bar{X} \\
&= 0
\end{aligned}$$

Section C

41. **(a)** 70°

Explanation: 70°

42. **(a)** ASA

Explanation: ASA

43. **(a)** BQ

Explanation: BQ

44. **(c)** SSS

Explanation: SSS

45. **(d)** 20°

Explanation: 20°

46. **(a)** 6 feet

Explanation: 6 feet

47. **(a)** 6 feet

Explanation: 6 feet

48. **(b)** AB and CD

Explanation: AB and CD

49. **(d)** AC and BD

Explanation: AC and BD

50. (c) I

Explanation: I
