

AREAS RELATED TO CIRCLES

Sector of a circle

Length of arc

$$\widehat{AB} = \frac{\theta}{360^\circ} \times 2\pi r$$

e.g. $\theta = 60^\circ$, $r = 3$ m

$$\widehat{AB} = \frac{60^\circ}{360^\circ} \times 2\pi \times 3$$

$$= \pi \text{ m}$$

Area of sector

$$AOBP = \frac{\theta}{360^\circ} \times \pi r^2$$

e.g. $\theta = 60^\circ$, $r = 3$ m

$$\text{Area} = \frac{60^\circ}{360^\circ} \times \pi \times 3^2$$

$$= \frac{3\pi}{2} \text{ m}$$

Area of segment (APB) =

$$\text{Area of sector (AOB)} - \text{Area of } \triangle AOB$$

Note:

1. If two circles touch each other externally, then the distance between their centres is equal to sum of their radii.
2. If two circles touch each other internally, then the distance between their centres is equal to difference of their radii.
3. The distance moved by a rotating wheel in one revolution is equal to the circumference of the wheel.

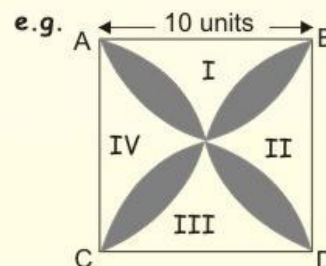

$$\text{Circumference} = 2\pi R$$

$$\text{Area} = \pi R^2$$

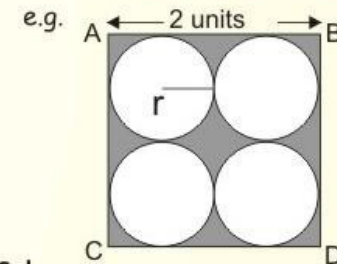

Some Important Formulas :

1. Heron's formula : Area of a triangle = $\sqrt{s(s-a)(s-b)(s-c)}$
Where s = Semi-perimeter and a, b, c are the sides of the triangle.
2. Area of a triangle = $\frac{1}{2} \times \text{base} \times \text{altitude}$
3. Area of an equilateral triangle = $\frac{\sqrt{3}}{4} a^2$.
4. Area of a rectangle = Length \times breadth
6. Area of a square of side 'a' = a^2 .
7. Length of diagonal of a square of a side 'a' = $\sqrt{2}a$.
8. Area of a parallelogram = Base \times Height
9. Area of a rhombus = $\frac{1}{2} d_1 d_2$.

Where d_1 and d_2 are the lengths of its diagonals.

Area of combination of plane figures

Sol.

$$r + r + r + r = \text{length of square}$$

$$\Rightarrow 4r = 2; r = 1/2$$

$$\text{Area of shaded reg.} = \text{Area of square} - \text{Area of 4 circles}$$

$$= (2 \times 2) - 4 \times \frac{\pi(1)^2}{4}$$

$$= 4 - \pi$$

Sol.

$$\text{Area of square ABCD} = 10 \times 10 = 100 \text{ cm}^2$$

$$\text{Ar. } (R_1) + \text{Ar. } (R_3)$$

$$= \text{Ar. square} - \text{Ar. two semicircle of radius 5cm}$$

$$= 100 - 2 \left(\frac{1}{2} \pi (5)^2 \right) = 100 - 25\pi$$

similarly $\text{Ar. } (R_2) + \text{Ar. } (R_4) = 100 - 25\pi$

So, Area of the shaded region

$$= \text{Ar. square} - (\text{Ar. } R_1 + \text{Ar. } R_2 + \text{Ar. } R_3 + \text{Ar. } R_4)$$

$$= 100 - (100 - 25\pi + 100 - 25\pi)$$

$$= (50\pi - 100) \text{ sq. units}$$
