Assertion & Reason Type Questions

Directions: Each of the following questions consists of two statements, one is Assertion (A) and the other is Reason (R). Give answer:

a. Both Assertion (A) and Reason (R) are true and Reason (R) is the correct explanation of Assertion (A).

b. Both Assertion (A) and Reason (R) are true but Reason (R) is not the correct explanation of Assertion (A).

c. Assertion (A) is true but Reason (R) is false.

d. Assertion (A) is false but Reason (R) is true.

Q1. Assertion (A): If a graph is plotted between the potential difference and the current flowing, the graph is a straight line passing through the origin.

Reason (R): The current is directly proportional to the potential difference.

Answer : (a) Both Assertion (A) and Reason (R) are true and Reason (R) is the correct explanation of Assertion (A).

Q2. Assertion (A): When the length of a wire is doubled, then its resistance also gets doubled.

Reason (R): The resistance of a wire is directly proportional to its length.

Answer : (a) Both Assertion (A) and Reason (R) are true and Reason (R) is the correct explanation of Assertion (A).

Q3. Assertion (A): Alloys are commonly used in electrical heating devices like electric iron and heater.

Reason (R): Resistivity of an alloy is generally higher than that of its constituent metals but the alloys have low melting points than their constituent metals. **(CBSE 2020)**

Answer : (c) The element of electric iron and heater are made up of alloys having high melting point.

Hence, Assertion (A) is true but Reason (R) is false.

Q4. Assertion (A): If p_1 and p_2 be the resistivity of the materials of two resistors of resistances R_1 and R_2 respectively and $R_1 > R_2$.

Reason (R): The resistance

$$R = \rho \frac{l}{A} \Longrightarrow \rho_1 > \rho_2$$

if $R_1 > R_2$.

Answer : (c) p is the characteristic of the material of resistors. It does not depend on the length and cross-sectional area of resistors. But Resistance (R) depends on the length and the cross-sectional area of the resistor.

So, R_1 may be greater than R_2 even when $p_1 \le p_2$.

Q5. Assertion (A): At high temperatures, metal wires have a greater chance of short circuiting.

Reason (R): Both resistance and resistivity of a material vary with temperature.

(CBSE 2020)

Answer : (b) Both Assertion (A) and Reason (R) are true but Reason (R) is not the correct explanation of Assertion (A).

Q6. Assertion (A): In a chain of bulbs, 50 bulbs are joined in series. One bulb is removed now and circuit is completed again. If the remaining 49 bulbs are again connected in series across the same supply, then light gets decreased in the room.

Reason (R): Net resistance of 49 bulbs will be less than 50 bulbs.

Answer : (d) When one bulb is removed, the resistance is decreased, hence current flowing through each bulb is increased. As, $H \propto I2$, hence light get increased in the room.

Q7. Assertion (A): The 200 W bulbs glows with more brightness than 100 W bulbs.

Reason (R): A 100 W bulb has more resistance than a 200 W bulb.

Answer: (b)

$$R = \frac{V^2}{P}$$
, i.e., $R \propto \frac{1}{P}$

i.e., higher is the wattage of a bulb, lesser is the resistance and so it will glow bright.

Q8. Assertion (A): Resistance of 50 W bulb is greater than that of 100 W.

Reason (R): Resistance of bulb is inversely proportional to rated power.

Answer : (b) Both Assertion (A) and Reason (R) are true but Reason (R) is not the correct explanation of Assertion (A).

Q9. **Assertion (A) :** Tungsten metal is used for making filaments of incandescent lamps.

Reason (R) : The melting point of tungsten is very low.

Answer: (c)

Q10. **Assertion (A) :** If a graph is plotted between the potential difference and the current flowing, the graph is a straight line passing through the origin.

Reason (R) : The current is directly proportional to the potential difference.

Answer: (a)

Q11. Assertion (A) : Longer wires have greater resistance and the smaller wires have lesser resistance.

Reason (R) : Resistance is inversely proportional to the length of the wire.

Answer: (c)

Q12. Assertion (A) : Alloys are commonly used in electrical heating devices, like electrical iron, toasters etc.

Reason (R) : Alloys do not oxidise (burn) readily at high temperatures.

Answer: (a)

Q13. Assertion (A) : When the resistances are connected end-to-end consecutively, they are said to be in series.

Reason (R) : In case the total resistance is to be increased, then the individual resistances are connected in series.

Answer: (b)

Q14. Assertion (A) : When the resistances are connected between the same two points, they are said to be connected in parallel.

Reason (R) : In case the total resistance is to be decreased, then the individual resistances are connected in parallel.

Answer: (b)

Q15. Assertion (A) : A cell is a device which converts chemical energy into electrical energy.

Reason (R) : Cell maintains a constant potential difference between its terminals for a long time.

Answer: (b)

Q16. Assertion (A) : The resistivity of a substance does not depend on the nature of the substance and temperature.

Reason (R) : The resistivity of a substance is a characteristic property of the material.

Answer : (d)

Q17. Assertion (A) : Tungsten metal is used for making filaments of incandescent lamps.

Reason (R) : The melting point of tungsten is very low.

Answer: (c)

Q18. Assertion (A) : The fuse is placed in series with the device.

Reason (R) : Fuse consists of a piece of wire made of a metal or an alloy of appropriate melting point.

Answer: (b)

Q19. Assertion (A) : The coil of a heater is cut into two equal halves and only one of them is used into heater. The heater will now require half the time to produce the same amount of heat.

Reason (R) : The heat produced is directly proportional to square of current.

Answer: (b)

Q20. Assertion (A) : The wires supplying current to an electric heater are not heated appreciably.

Reason (R) : Resistance of connecting wires is very small and H<< R.

Answer: (a)

Q21. Assertion (A) : A current carrying wire should be charged.

Reason (R) : The current in a wire is due to flow of free electrons in a definite direction.

Answer: (d)

Q22. Assertion (A) : Electron has a negative charge.

Reason (R) : Electrons move always from a region of higher potential to a region of lower potential.

Answer: (c)

Q23. Assertion (A) : Heater wire must have high resistance and high melting point.

Reason (R) : If resistance is high, the electric conductivity will be less.

Answer: (b)

Q24. Assertion (A) : In a chain of bulbs, 50 bulbs are joined in series. One bulb is removed now and circuit is completed again. If the remaining 49 bulbs are again connected in series across the same supply, then light gets decreased in the room.

Reason (R) : Net resistance of 49 bulbs will be less than 50 bulbs.

Answer: (d)

Q25. Assertion (A) : Fuse wire must have high resistance and low melting point.

Reason (R) : Fuse is used for small current flow only.

Answer: (c)

Q26. Assertion (A) : The connecting wires are made of copper.

Reason (R) : The electrical conductivity of copper is high.

Answer: (a)

Q27. Assertion (A) : Current is the rate of flow of charge.

Reason (R) : Electric current will not flow between two charged bodies when connected, if they are at same potential.

Answer:(b)

Q28. Assertion (A) : A bird perches on a high power line and nothing happens to the bird.

Reason (R) : The circuit is incomplete for the bird sitting on high power line.

Answer: (a)

Q29. Assertion (A) : When a wire is stretched to three times of its length, its resistance becomes 9 times.

Reason (R) : Resistance is directly proportional to length of wire.

Answer: (b)

Q30. Assertion (A) : It is advantageous to transmit electric power at high voltage.

Reason (R) : High voltage implies high current.

Answer: (c)

Q31. Assertion (A) : Bending a wire does not affect electrical resistance.

Reason (R) : Resistance of a wire is proportional to resistivity of material.

Answer: (b)

Q32. Assertion (A) : A voltmeter and ammeter can be used together to measure resistance but not power.

Reason (R) : Power is proportional to voltage and current.

Answer: (d)

Q33. Assertion (A) : The 200 W bulbs glows with more brightness than 100 W bulbs.

Reason (R): A 100 watt bulb has more resistance than a 200 W bulb.

Answer: (b)

Q34. Assertion (A) : If 10 bulbs are connected in series and one bulb fused, then the remaining 9 bulbs will not work.

Reason (R) : Bulb of higher wattage will give less bright light.

Answer:(b)

Q35. Assertion (A) : Good conductors of heat are also good conductors of electricity and vice versa.

Reason (R) : Mainly electrons are responsible for conduction.

Answer: (a)
