III. Short Answer Type

39. 5 volume H_2O_2 solution means that hydrogen peroxide contained in 1 volume of this solution will decompose to give 5 volumes of oxygen at STP i.e. if 1L of this solution is taken, then 5 L of oxygen can be produced from this at STP. Chemical equation for the decomposition of H_2O_2 is $2\text{H}_2\text{O}_2(\text{l}) \longrightarrow \text{O}_2(\text{g}) + 2\text{H}_2\text{O}(\text{l})$.

It shows that 68 g H_2O_2 gives 22.7 L of O_2 at STP, so 5 L oxygen will be obtained from :

$$\frac{68\text{g} \times 5\text{L}}{22.7\text{L}} = \frac{3400}{227} \text{ g } \text{H}_2\text{O}_2 = 14.9 \text{ g} \approx 15 \text{ g } \text{H}_2\text{O}_2$$

i.e., 15 g H_2O_2 dissolved in 1 L solution will give 5 L oxygen or 1.5 g H_2O_2 /100 mL solution will give 500 mL oxygen. Thus 15 g/L or 1.5% solution is known as 5V solution of H_2O_2 .
