17. Calculation of New Profit-sharing Ratio:

Sanju's Profit Share =
$$\frac{1}{5}$$

Remaining Profit Share =
$$1 - \frac{1}{5} = \frac{4}{5}$$

Sumit and Ram will share $\frac{4}{5}$ th profit in their old profit-sharing ratio, i.e., equally. Thus,

Sumit's New Profit Share =
$$\frac{4}{5} \times \frac{1}{2} = \frac{4}{10}$$

Ram's New Profit Share =
$$\frac{4}{5} \times \frac{1}{2} = \frac{4}{10}$$

Profit-sharing Ratio of Sumit, Ram and Sanju =
$$\frac{4}{10}$$
 :: $\frac{1}{5}$ = 2 : 2 : 1.

Calculation of Sacrifice and Gain:

Sumit =
$$\frac{1}{3} - \frac{2}{5} = \frac{3}{15} = (\frac{1}{15})$$
 Gain

Ram =
$$\frac{1}{3} - \frac{2}{5} = \frac{3-6}{15} = (\frac{1}{15})$$
 Gain

Sumit =
$$\frac{1}{3}$$
 - $\frac{2}{5}$ = $\frac{5-6}{15}$ = $(\frac{1}{15})$ Gain
Ram = $\frac{1}{3}$ - $\frac{2}{5}$ = $\frac{5-6}{15}$ = $(\frac{1}{15})$ Gain
Sanju = $\frac{1}{3}$ - $\frac{1}{5}$ = $\frac{5-3}{15}$ = $\frac{2}{15}$ Sacrifice

Calculation of New Profit-sharing Ratio after C's Admission:

Old Profit-sharing Ratio of A and B = 5:3 or $\frac{5}{8}$: $\frac{3}{8}$

Let the total share be = 1;

C's share = $\frac{1}{4}$;

The remaining share of A and B =
$$1 - \frac{1}{4} = \frac{3}{4}$$

Distribute the remaining share of $\frac{3}{4}$ in the old profit-sharing ratio of 5:3 between A and B.

A's New share =
$$\frac{3}{4} \times \frac{5}{8} = \frac{15}{32}$$
;

B's New share = $\frac{3}{4} \times \frac{3}{8} = \frac{9}{32}$; C's share = $\frac{1}{4} \times \frac{8}{8} = \frac{8}{32}$

Thus, New Profit-sharing Ratio of A, B and $C = \frac{15}{32} : \frac{9}{32} : \frac{8}{32} = 15 : 9 : 8$

Since only a share of the new partner is given in question so C acquires his share from A and B in their old profit-sharing ratio.

Shelu's New Share of Profits = $(\frac{3}{5} \times \frac{4}{5}) = \frac{12}{25}$ Disha's New Share of Profits = $(\frac{2}{5} \times \frac{4}{5}) = \frac{8}{25}$

New profit sharing ratio between Shelu: Disha: Vanraj = 12:8:52

Calculation of Vanraj's Capital

Total Adjusted Capital of the Old Partners = Shelu's Capital + Disha's Capital = ₹ (7,59,000 + 4,53,000) = ₹ 12,12,000

Combined New Share of the Old Partners = $(\frac{12}{25} + \frac{8}{25}) = \frac{20}{25}$

Total Capital of the firm = (Adjusted Capital of the Old Partners × Reciprocal of Combined New Share of the Old Partners)

Total capital of the firm = (₹ 12,12,000 × $\frac{25}{20}$) = ₹ 15,15,000

Vanraj's Capital = Total Capital of the firm × His Profit share = ₹ $(15,15,000 \times \frac{1}{5})$ = ₹ 3,03,000

Calculation of share to be Forfeited: calls in arrears 3,000 (given) than we divide this amount with call money i.e 3. so shares are 3,000/3 = 1,000

Calculation for reissue amount: Again 3,000(given) divide 3,000/1,000 = 3 i.e loss amount so bank amount is 10 (face value) - 3 = 7

Notes

- i. The entry for receiving Share Application money is passed first and the entry for transferring the application money to Share Capital A/c is passed thereafter. This is done because Cash is received first and allotment is made afterwards.
- ii. In case of Allotment, First Call and Second Call, the entry for transferring the same to Share Capital A/c is made first when the resolution is passed and the entry for receiving money from shareholders is made afterwards as money from shareholders is received only afterwards.
- iii. In case nothing is mentioned regarding the class of shares issued, they are always treated as equity shares.
- iv. In actual practice all cash transactions are passed through the Cash Book. Hence, there will be no journal entries relating to cash and there will not be a Bank Account in the Ledger.
- v. Share Issue Expenses and Incorporation Costs are written off first from Securities Premium and in its absence from Statement of Profit & Loss in the same year in which they are incurred

OR

(b) 13.75%

Explanation:

Net profit before any tax = $\frac{Net \, profit \, After \, Tax}{1 - Tax \, profit}$ + Interest on long term Borrowing

Net profit before Interest and tax = $\frac{1-Tax\ rate}{1,20,000}$ + 20,000 = 2,20,000

Return on investment = $\frac{\textit{Net profit Before Interest and Tax}}{\textit{Net profit Before Interest and Tax}} \times 100$

Return on investment = $\frac{Capital\ employed}{16,00,000} \times 100 = 13.75\%$

(d) Outflow ₹ 61,600

Explanation:

Cash flow from financing activities:

Redemption of debentures	₹ 40,000
Interest on debentures	₹ 21,600
	₹ 61,600

Interest on debentures

= ₹ 19,200 + ₹ 2,400

= ₹ 21,600

A Common size balance sheet is an income statement in which the total of assets or equity and liabilities is assumed to be equal to 100 and all the figures are expressed as a percentage of the total. In other words, each asset is expressed as a percentage of total assets and each item of equity and liability is expressed as a percentage to total equity and liabilities.

Uses of the Common Size Balance Sheet are as follows:i. To analyse changes in individual items of the balance sheet.

ii. To establish the trend in various items of assets and liabilities.

32.	S. No.	Items	Major-Heading of Balance Sheet	Sub-Heading of Balance Sheet	
	i. Stores and Spares Current A		Current Assets	Inventories	
	ii. Debentures due for Redemption Current Liabilities 0		Current Liabilities	Other Current Liabilities	
	iii.	Live Stock	Non-Current Assets	property plant and equipment and intangible Assets-Tangible Assets	
	iv.	Intellectual Property Rights	Non-Current Assets	property plant and equipment and intangible Assets-Intangible Assets	
	v.	Advance from Customers	Current Liabilities	Other Current Liabilities	
	vi.	Advance to Suppliers	Current Assets	Other Current Assets	
	vii.	Commission Received in Advance	Current Liabilities	Other Current Liabilities	

33. Debt Equity Ratio = 2:1

Debt Equity Ratio = $\frac{Debt}{Equity} = \frac{20,00,000}{10,00,000}$ [assumed figures]

i. Loan from ICICI - ₹ 1,00,000

Increases as debts will increases $\frac{21,00,000}{10,00,000} = 2.1:1$

ii. Machinery	purchased	for cash ₹	1,50,000
---------------	-----------	------------	----------

No, change as, machinery is a fixed assets and cash is a current asset, then it will not change debt equity ratio.

iii. Redeem 9% debentures of ₹ 1,00,000

New Ratio = $\frac{19,00,000}{10,00,000}$ = 1.9 : 1

Thus, Ratio will decrease.

iv. Issue equity shares ₹ 5,00,000 for machinery

Equity = 10,00,000 + 5,00,000 = 15,00,000

New ratio = $\frac{20,00,000}{15,00,000} = 0.8:1$

Equity will increase, therefore ratio will decrease.

OR

OK .	
i. Gross Profit Ratio:- This ratio provides a correlation between Gross Profit and Operating Revenue, i.e. Sales of Net. This ratio is measured and seen in proportion. To compute this percentage of Net.	entage, the
formula is:	
Gross Profit Ratio = $\frac{\text{Gross Profit}}{\text{Revenue from operations or Net Sales}} \times 100$	
ii. Ratio of inventory turnover:- This ratio reveals the relationship between the cost of operational profits for the year and the total inventory retained during the year:	
Inventory Turnover Ratio = $\frac{\text{Cost of Revenue from Operations (Cost of Goods Sold)}}{\text{Average Inventory}} = \underline{\qquad}$ Times	
iii. Current Ratio:- The relationship between current assets and a company's current liabilities is clarified in this Ratio.	
The Ratio estimation formula is: Current Ratio = Current Assets
